This book was born from curiosity. To begin with, it was the curiosity of an economist who studied in the 60's in an environment which has subsequently developed from national into global economics. Who has to recognize that politicians, scholars and large segments of society oblivious to supranational authorities and economic globalization forces continue to labour under the notion that they are still fully autonomous and sovereign when shaping national economic policy. And pretend as though their own national state were still the "master in its own house" that despite unbridled market economics could continue to dictate to the economy and companies how to live and in which "rooms". All that has become fiction. The laws of globalization diminish the manoeuvring space for shaping national economic policy. Even if many folks today don't want to hear it: The issue is no longer achieving what is socially desirable for the own society but rather the optimal adaptation of society and social benefits to the politically practicable.

Contains selected papers from workshops organized by the United Nations Programme on Space Applications in 1999.

The United States has long exploited Earth's orbits to enhance security, generate wealth, and solidify its position as a world

leader. America's ambivalence toward military activities in space, however, has the potential to undermine our future security. Many in Washington possess a peculiar regard for space and warfare. Some perceive space as a place to defend and fight for America's vital interests. Others—whose voices are frequently dominant and manifested in public rhetoric, funded defense programs, international diplomacy, and treaty commitments—look upon space as a preserve not to be despoiled by earthly strife. After forty years of discussion, the debate over America's role in space rages on. In light of the steady increase in international satellite activity for commercial and military purposes, American's vacillation on this issue could begin to pose a real threat to our national security. Steven Lambakis argues that this policy dysfunction will eventually manifest itself in diminished international political leverage, the forfeiture of technological advances, and the squandering of valuable financial resources. Lambakis reviews key political, military, and business developments in space over the past four decades. Emphasizing that we should not take our unobstructed and unlimited access to space for granted, he identifies potential space threats and policy flaws and proposes steps to meet national security demands for the twenty-first century.

The pace of space exploration has long been dictated by political motivations. This book helps to explain why this is so in the post-Cold War era. Combining essays, a glossary of terms, tables and statistics, this new title from Routledge comes as a welcome addition to this increasingly popular topic. The book: covers theories and concepts, as well as current issues gives a background to international and national space agencies contains essays that cover military, commercial and governmental actors in space politics.
