Conjectures and Refutations is one of Karl Popper's most wide-ranging and popular works, notable not only for its acute insight into the way scientific knowledge grows, but also for applying those insights to politics and to history. It provides one of the clearest and most accessible statements of the fundamental idea that guided his work: not only our knowledge, but our aims and our standards, grow through an unending process of trial and error.

'The stories here will provoke, delight and impress. Joost Zwagerman's selection forms a fascinating guidebook to a landscape you'll surely want to wander in again.' Clare Lowden, TLS 'There is a lot of northern European melancholy in the collection, though often tinged with wry humour...an excellent book' Jonathan Gibbs, Minor Literatures 'We were kids - but good kids. If I may say so myself. We're much smarter now, so smart it's pathetic. Except for Bavink, who went crazy' A husband forms gruesome plans for his new fridge; a government employee has a haunting experience on his commute home; prisoners serve as entertainment for wealthy party guests; an army officer suffers a monstrous tropical illness. These short stories contain some of the most groundbreaking and innovative writing in Dutch literature from 1915 to the present day, with most pieces appearing here in English for the first time. Blending unforgettable snapshots of the realities of everyday life with surrealism, fantasy and subversion, this collection shows Dutch writing to be an integral part of world literary history. Joost Zwagerman (1963-2015) was a novelist, poet, essayist and editor of several anthologies. He started his career as a writer with bestselling novels, describing the atmosphere of the 1980s and 1990s, such as Gimmick!(1988) and False Light (1991). In later years, he concentrated on writing essays - notably on pop culture and visual arts - and poetry. Suicide was the theme of the novel Six Stars (2002). He took his own life just after having published a new collection of essays on art, The Museum of Light.

An essential collection of essays for librarians looking to support E-science programs and capabilities to their institutions. * Comprises essays from nine expert contributors—each an innovator who has successfully integrated E-science programs at their institutions * Includes bibliographies to additional readings and resources about E-science

This book analyses how socially responsible investments as well as the rising importance of Islamic finance are linked to the shift towards renewable energy. Academics and practitioners in the field take a global perspective and present case studies from several countries. The book is divided into three parts: The first part sheds new light on the energy shift towards renewable energy. The second shows the increasing interest of investors in sustainability, and the authors argue that investors not only look at expected returns and risks, but also at social returns. Finally, the third part explains the need for social returns in Islamic finance, which cannot be explained by traditional finance theory. This is the fifth volume in a series on energy organized by the Centre for Energy and Value Issues (CEVI).

is both a player and a spectator, is explained here illuminatingly. With regard to logical ambiguities and paradoxes, which may show up in all these topics, he, like Locker, is of the opinion that, philosophically speaking all apory of a lower level have to be accepted an a higher level of thinking. After the above expositions of a more general purport we turn now to two contributions which are particularly focused on Bohr's concept of complementarity. First is the article of Hilgevoord who briefly and non-technically describes a short curriculum vitae of the concept beginning with Planck through Bohr to Heisenberg and Schrodinger. Included in this short story, of course, is the famous wave-particle duality and the paradox inherent in it many physicists are still saddled with. How this paradox was solved is explained here simply and clearly: first, generally by quantum mechanics where the disturbance theory of measurement was supposed to be of some relevance, and secondly, where this theory is further refmed leading to Bohr's conclusion of the essential unsolvability, and accordingly the completeness, of the statistical element of quantum mechanics. The reading of this short article may arouse questions and surmises

whether complementarity has been ruminated by Bohr to tame the law of excluded middle dividing the well-defined content of position measurement from that of momentum measurement, just to mention one. Whatever it may be the idea of complementarity betrays the perplexity of the observing system in dealing with nature's complexity.
