Running your own small farm is demanding enough, but making it profitable presents a host of further challenges. In this business-savvy guide to farming on a small scale, Sarah Aubrey covers everything from financial plans and advertising budgets to web design and food service wholesalers. Learn how to isolate your target audience and craft artisanal products that will delight and amaze customers. With a solid business strategy in place, you can confidently turn your passion into a productive and profitable venture.

Farming is a business, as well as a way of life. Whole Farm Management is a comprehensive guide developed by the Small Farms Program at Oregon State University to help aspiring and beginner farmers make smart business decisions to ensure lasting success. In clear, accessible language, this book covers every essential step, from developing a strategic plan to acquiring equipment, establishing infrastructure, finding markets, budgeting, managing day-to-day operations, and selecting a business structure for long-term viability. The emphasis throughout is on using sustainable agricultural systems and managing the whole farm, whether raising grass-based livestock, perennial food crops, or

annual crops such as flowers. Case studies of successful farms, along with guidance and solutions to common problems from long-time farmers, round out this essential handbook.

An increasing number of African smallholders are moving from subsistence farming to selling at least part of their output. To shift successfully to a more commercial footing they need a lot more than the production advice traditionally provided by extension services. They need to understand how markets work. They also need advice on postharvest handling, help with business planning and marketing, assistance with organization, information on prices, links to buyers and credit, help with contracts and standards, and many other types of assistance. These agricultural business development services are provided by a mix of private companies, NGOs, cooperatives and government agencies - in what is called a "pluralistic extension system". Farmers - and other clients such as input stores, small-scale processors and traders - get some services for free, paid for by donors or the government. Others are subsidized: the farmers pay part of the cost. For still others, the farmers must pay the full cost. That leads to questions of sustainability (what happens when the donor's money runs out?), accountability (whom do the service providers listen to: the farmers, or the source of the funds?), and inclusiveness (how to ensure that women, the poor and disadvantaged get the services they need but cannot afford?). This book describes the two dominant approaches to providing services: supply-driven (where the funder decides what services should be offered), and market-driven

# Access Free Agricultural Business Plan Guidelines Department Of

(where more emphasis is put on market forces). It looks at how 12 business service providers from across Africa run their businesses. It describes the seven different "business models" that they pursue, and examines the features of each one. Based on their experiences, it proposes a new, needs-driven approach, which aims to overcome the shortcomings of both the supply-driven and the market-driven approaches by taking the needs of clients as a starting point for policy and action.

This report is part of a multi-volume technical report series entitled, *Running a Food Hub*, with this guide serving as a companion piece to other United States Department of Agriculture (USDA) reports by providing in-depth guidance on starting and running a food hub enterprise. In order to compile the most current information on best management and operations practices, the authors used published information on food hubs, surveyed numerous operating food hubs, and pulled from their existing experience and knowledge of working directly with food hubs across the country as an agricultural business consulting firm. The report's main focus is on the operational issues faced by food hubs, including choosing an organizational structure, choosing a location, deciding on infrastructure and equipment, logistics and transportation, human resources, and risks. As such, the guide explores the different decision points associated with the organizational steps for starting and implementing a food hub. For some sections, sidebars provide "decision points," which food hub managers will need to address to make key operational decisions. This illustrated guide

# Access Free Agricultural Business Plan Guidelines Department Of

may assist the operational staff at small businesses or third-party organizations that may provide aggregation, marketing, and distribution services from local and regional producers to assist with wholesale, retail, and institution demand at government institutions, colleges/universities, restaurants, grocery store chains, etc. Undergraduate students pursuing coursework for a bachelor of science degree in food science, or agricultural economics may be interested in this guide. Additionally, this reference work will be helpful to small businesses within the food trade discipline.

This book provides the essentials to write a successful business plan. The represented methods and best practices have been approved over many years in practice with many management consulting engagements. The book is beautifully structured, it has a pragmatic emphasis and an autodidactic approach. The reader gets acquainted with the skills and competencies as well as tools, required for the planning and development of the business plan project.

Air Emissions from Animal Feeding Operations: Current Knowledge, Future Needs discusses the need for the U.S. Environmental Protection Agency to implement a new method for estimating the amount of ammonia, nitrous oxide, methane, and other pollutants emitted from livestock and poultry farms,

## Access Free Agricultural Business Plan Guidelines Department Of

and for determining how these emissions are dispersed in the atmosphere. The committee calls for the EPA and the U.S. Department of Agriculture to establish a joint council to coordinate and oversee short - and long-term research to estimate emissions from animal feeding operations accurately and to develop mitigation strategies. Their recommendation was for the joint council to focus its efforts first on those pollutants that pose the greatest risk to the environment and public health.
