**Development** The book begins by discussing the nature of preindustrial food crises and the changes that have occurred since the 19th century with the ascent of technical science and the fossil fuel revolution. It explains how these changes improved living standards but that the realization of this improvement was usually dependent on government support for smallholder modernization. The author sets out how the evolution of food security in different regions has been influenced by farm policy choices and how these choices were shaped by local societal characteristics,

Development relations and changing configurations in metropolitan countries. Separate chapters are devoted to the interaction of this evolution with debates on food security and economic growth and with international economic policies. The final chapters highlight the new challenges for global food security that will arise as traditional sources of biomass production and the more easily extractable reserves of fossil biomass become depleted or can no longer be used. Overall, the book emphasizes the inadequacy of current explanations with regard to

Development of alternative agricultural growth rates and land tenure systems, and impact on cereal consumption and food security. The book provides detailed analysis of each element of agricultural modernization, emphasizing the central role of government in accelerated growth in private sector dominated agriculture. The book differs from the bulk of current conventional wisdom in its placement of the non-poor small commercial farmer at the center of growth, and explains how growth translates into poverty reduction. This new book is a follow up to Mellor's

Development of policymakers and development practitioners on the agricultural sector and food security concerns. But even without those traumatic events, the importance of agriculture for developing countries—and for an adequate functioning of the world economy—cannot be denied. First, although declining over time, primary agriculture still represents important percentages of developing countries' overall domestic production, exports, and employment. If agroindustrial, transportation, commercial, and other related activities are also counted, then the

**Development** and social importance of agriculture-based sectors increases significantly. Furthermore, large numbers of the world's poor still live in rural areas and work in agriculture. Through the links via production, trade, employment, and prices, agricultural production is also crucial for national food security. Second, it has been shown that agriculture in developing countries has important growth and employment multipliers for the rest of the economy, and agriculture seems to have larger positive effects in reducing poverty than growth in other
