The purpose of this book is not to teach ground school or flight training, but to teach the reader how to shop for these services and, once purchased, how to keep them affordable, efficient and useful. Learn about the new Sport Pilot Certificate license, ultralights, light sport aircraft, experimental aircraft, how to pass the FAA exams, the steps involved in learning to fly, getting the best flying lessons, how to choose instructors, and more on a budget.

Learn how to construct and finish plastic model aircraft by mastering basic and advanced techniques in assembling, aligning, gluing, surface preparation, painting, and decaling.

The major objective of this book was to identify issues related to the introduction of new materials and the effects that advanced materials will have on the durability and technical risk of future civil aircraft throughout their service life. The committee investigated the new materials and structural concepts that are likely to be incorporated into next generation commercial aircraft and the factors influencing application decisions. Based on these predictions, the committee attempted to identify the design, characterization, monitoring, and maintenance issues that are critical for the introduction of advanced materials and structural concepts into future aircraft.
