Academic Paper from the year 2017 in the subject Business economics - Offline Marketing and Online Marketing, grade: 78, University of South Wales (Business School), course: Strategic Marketing, language: English, abstract: This work uses Amazon as a case study organisation to criticize the statement: "The best marketing strategies aren't top down, they're outside in, starting with the customers' needs and wants." It makes use of different academic literatures to evaluate how the customer voice drives strategic marketing decisions in this organisation. In its history, the company's success has been grounded on its effective strategic planning which is purely customer-oriented. The analysis of the company marketing strategy has shown that Amazon enjoys the advantages of the web technology, which the company is hyper dependent on. However, due to putting customer first, the company has also opened some physical outlets in different locations where Amazon applies a 4Ps Marketing strategy besides segmentation and positioning. Although the company has developed its strengths and positioned itself as a global giant, it was advised to focus on four core elements of marketing mix, since all other companies are striving to become customer-oriented and different offline companies are coming online, which gradually increases the competition.

Research Paper (postgraduate) from the year 2012 in the subject Business economics - Operations Research, grade: B, The University of Liverpool, language: English, abstract: This paper investigates the influence of e-commerce and related factors on the consumer behaviour with respect to the purchase decisions of mobile phones. The different factors that influence the consumer behaviour related to buying mobile phones have been identified in this research. Electronic commerce or e-Commerce consists of the buying and selling of products and services over electronic systems such as the Internet and other computer networks. The amount of trade conducted electronically is remarkably increased with the widespread use of the Internet (Blackwell, 2006). To facilitate global trade various schemes for transaction of electronic money have been introduced. Such schemes offer concrete solutions to the risk associated with trust, information security, international finance, and other factors posing uncertainty. Trust is a major focus of e-commerce professionals. In traditional trade much of mechanisms for building trust are related to the form of communication between the participants and costs related to the contact in person. In case of remote access (in terms of the Internet, for example) many of the traditional mechanisms for establishing trust between participants exists. Therefore, options to enhance or introduce other new mechanisms are used for confidence building (Bodenhause, 2012). There are different forms of e-commerce. The e-commerce models are:

While there exist various advantages and disadvantages to online business, it plays a major role in contemporary business methods. Improving E-Commerce Web Applications Through Business Intelligence Techniques provides emerging research on the core areas of e-commerce web applications. While highlighting the use of data mining, search engine optimization, and online marketing to advance online business, readers will learn how the role of online commerce is becoming more prevalent in modern business. This book is an important resource for vendors, website developers, online customers, and scholars seeking current research on the development and use of e-commerce.

In the next few years, it is expected that most businesses will have transitioned to the use of electronic commerce technologies, namely e-commerce. This acceleration in the acceptance of e-commerce not only changes the face of business and retail, but also has introduced new, adaptive business models. The experience of consumers in online shopping and the popularity of the digital marketplace have changed the way businesses must meet the needs of consumers. To stay relevant, businesses must develop new techniques and strategies to remain competitive in a changing commercial atmosphere. The way in which e-commerce is being implemented, the business models that have been developed, and the applications including the benefits and challenges to e-commerce must be discussed to understand modern business. The Research Anthology on E-Commerce Adoption, Models, and Applications for Modern Business discusses the best practices, latest strategies, and newest methods for implementing and using e-commerce in modern businesses. This includes not only a view of how business models have changed and what business models have emerged, but also provides a focus on how consumers have changed in terms of their needs, their online behavior, and their use of e-commerce services. Topics including e-business, e-services, mobile commerce, usability models, website development, brand management and marketing, and online shopping will be explored in detail. This book is ideally intended for business managers, e-commerce managers, marketers, advertisers, brand managers, executives, IT consultants, practitioners, researchers, academicians, and students interested in how e-commerce is impacting modern business models.

This textbook introduces readers to digital business from a management standpoint. It provides an overview of the foundations of digital business with basics, activities and success factors, and an analytical view on user behavior. Dedicated chapters on mobile and social media present fundamental aspects, discuss applications and address key success factors. The Internet of Things (IoT) is subsequently introduced in the context of big data, cloud computing and connecting technologies, with a focus on industry 4.0, smart business services, smart homes and digital consumer applications, as well as artificial intelligence. The book then turns to digital business models in the B2C (business-to-consumer) and B2B (business-to-business) sectors. Building on the business model concepts, the book addresses digital business strategy, discussing the strategic digital business environment and digital business value activity systems (dVASs), as well as strategy development in the context of digital business. Special chapters explore the implications of strategy for digital marketing and digital procurement. Lastly, the book discusses the fundamentals of digital business technologies and security, and provides an outline of digital business implementation. A

Master's Thesis from the year 2018 in the subject Business economics - Trade and Distribution, grade: 1,00, Cologne University of Applied Sciences (Informatik), course: Web Science / E-Commerce, language: English, abstract: The internet has revolutionised the way people shop and electronic commerce has reshaped the retail landscape dramatically. It suddenly allowed small companies to reach out to millions of potential customers and lowered market entry barriers significantly in areas where once only big retail companies competed against each other. But the times when small companies could create online shops and compete with the big players are almost over yet again, and Amazon catalyses this change by seizing a growing share of the whole online retail market. Every second dollar spent online in the US is already spent on the Amazon.com marketplace and the trend in the German market is going in the same direction. The fact that a significant number of overall online sales are generated on the Amazon marketplace impacts other e-tailers. They must react to market concentration and consider whether or not they want to sell their products on Amazon. There are many opportunities and risks that can result from cooperation with Amazon but there is a lack of papers and books that consider both aspects at the same time, quantifying them, weighing each up against the other, and deriving conclusions from it. The aim of this thesis is to close the aforementioned gap in available literature by presenting the current market situation in the e-commerce and analysing the signs of a further market concentration, in order to provide evidence of the problematic situation small and medium-sized enterprises (SME) are in. The thesis then examines the option of cooperating with Amazon as a possible solution to react on this trend and therefore researches the possible chances and risks that could arise through such cooperation. Those insights are thereafter incorporated into a strategic recommendation for e-tailers who consider selling on Amazon. Furthermore, a selling guide which was evaluated in practice, depicts how a company could sell products successfully on the marketplace. In the end, this thesis should contribute to e-tailers' knowledge about the current and future market situation in e-commerce. In addition, the insights presented should support e-tailers' decision making process when they are confronted with the question of cooperating with the e-commerce giant or not.
