75% of companies without a business continuity plan fail within three years. Disruptive incidents can affect any organization and occur at any moment. ICT outages, cyber attacks, natural disasters, terrorist attacks, pandemics, supply chain failures and other unexpected events can all affect productivity and in many cases place a company's survival in serious jeopardy. Business continuity planning is essential to overcoming business disruptions, but too many companies prepare business continuity plans and then shelve them, only for those plans to fail when they're actually needed. 80% of companies that have not recovered from a disaster within one month go out of business. A business continuity plan that isn't validated isn't a plan at all - it's merely a strategy. Indeed, in some cases an untested plan is worse than no plan at all. In spite of this, only 30% of businesses actually validate their business continuity plans. Product overview Business continuity planning is a process of continual improvement, not a matter of writing a plan and then putting your feet up. Attempting to validate every aspect of your plan, however - particularly in a live rehearsal situation - could create a disaster of your own making. Validating Your Business Continuity Plan examines the three essential components of validating a business continuity plan - exercising, maintenance and review - and outlines a controlled and systematic approach to BCP validation while considering each component, covering methods and techniques such as table-top reviews, workshops, and live rehearsals. The book also takes account of industry standards and guidelines to help steer the reader through the validation process, including the international standard ISO 22301 and the Business Continuity Institute's Good Practice Guidelines. In addition, it provides a number of case studies based on the author's considerable experience - some of them successful, others less so - to highlight common pitfalls and problems associated with the validation process. Contents Introduction Standards and guidelines Business continuity begins at home Defining your exercise programme Selected scenarios Live rehearsal case studies It could happen to anyone, couldn't it? This book provides an understanding of Business Continuity Management (BCM) implementation for local/international construction operations, with a primary focus on Indonesian construction firms as an illustrative example. It reviews the whole spectrum of work relating to organizational culture (OC) and the institutional framework (IF) as one of the key ways for companies to evaluate and implement BCM in construction operations. Once readers have acquired a sound understanding of BCM, OC and IF linkages in construction firms, the lessons learned can be extended to other companies. This is facilitated through a systematic assessment framework presented in the book using a Knowledge Based Decision Support System (BCM-KBDS5), which allows these companies to evaluate their current status quo with respect to BCM, OC and IF, and then make informed decisions on how and to what extent BCM should be implemented in their operations. As such, the book offers a unique blend of theory and practice, ensuring readers gain a far better understanding of BCM implementation in the construction industry.

Businesses and governments worldwide are increasingly being disrupted by more frequent natural disasters, mounting workforce violence, and skyrocketing cyber attacks. It's increasingly a question of "when" - not "if" - they will face such a crisis. This book tells you how to prepare - step-by-step. The good news is that costs of being prepared are minuscule compared to the staggering hits organizations are increasingly taking. This book gets into the nitty-gritty of preparing for such crises - from building senior management support and involvement . . . to training top-flight crisis management teams. Specifically, it tells business continuity and crisis management professionals how to get their organizations into a constant state of readiness. That's crucial since, of course, organizations don't know the precise nature of the crisis in advance (timing, location, or impact). Think in terms of "instant-on." And, they have to have wide range of contingencies to deal with whatever they may face. Regina Phelps tells you exactly how to do all of that step-by-step . . . and how to build support up and down the organization to make it happen.
