If you also can't turn the key past 45 degrees, it probably means the lock cylinder needs replacing. BMW has something called "Door Lock w/key repair kit" or something like that, BMW part number 51211924903 or maybe 51-21-9-061-343. Both have been reported as correct so who knows? Anyway, it should cost around \$30 (us) from a dealer.

The control unit then sends the appropriate lock/unlock "signal" to all the actuators (in parallel), which use a solenoid to produce the same movement in the locking mechanism as does the physical key lock. Each actuator is actually a double unit. - the internal "request" contacts that send ground to the control

The central locking unit is located behind/below the drivers side kickpanel speaker. To get to it you need to remove the kick panel which is held on by 1 Phillips screw, and the two bolts holding down the hood release lever. Once the kick panel is removed, the speaker is held in by 3 screws. Once removed the central locking unit is held in by a bracket which also holds the interior light relay.

Overview. The central locking system uses a series of microswitches and actuators to power all of the locks open or closed when any one lock is turned. Power is sent to the actuators by the central locking relay, and power goes through the driver's door loom and back to make it all happen. Therefore, the two biggest problem areas are the central locking relay, and this power wire known as the Red/Black wire.

A fast-paced action thriller inspired by real events in the aftermath of the Iraq War. With Saddam Hussein deposed and an entire country in need of rebuilding, former Royal Marine John Pierce hears the siren call of adventure and opportunity. His fledgling UK business is struggling to support his young family and he has connections in the Iraqi capital — fate seems to point one way. In early 2004, Pierce rolls the dice when he jumps into a taxi in Jordan and heads for the turmoil of postwar Baghdad to grab a share of the reconstruction gold rush. But when Iraq spirals into the hell of a full-blown insurgency, he must rely on his wits and his local friends if he ’ s to evade the rampant bloodshed. As the action rolls across the blood-stained Iraqi landscape and embraces London ’ s seedy underbelly, Pierce tangles with the authorities at home and finds himself thrust into the heart of British and American covert operations against Al-Qaeda in Iraq. Having set out with little more than ambitious goals and an appetite for risk, can a determined ex-bootneck survive the mounting chaos unscathed and succeed in hitting the jackpot? Jack Leavers is a former Royal Marine with over thirty-years ’ experience working in the military, private security, corporate investigations, maritime counter-piracy, and risk management. His varied career has included numerous deployments to conflict zones around the world such as Northern Ireland, Bosnia, Iraq, Afghanistan, trouble spots in Africa, and the Somali pirate-infested waters of the Indian Ocean. He continues to work in challenging environments and has now begun to pen novels inspired by some of the more enterprising projects that got the green light and other audacious plans that didn ’ t. When knuckling down to write, he is normally based in London, UK.

Read the book that inspired the movie! Sixteen-year-old Starr lives in two worlds: the poor neighbourhood where she was born and raised and her posh high school in the suburbs. The uneasy balance between them is shattered when Starr is the only witness to the fatal shooting of her unarmed best friend, Khalil, by a police officer. Now what Starr says could destroy her community. It could also get her killed. Inspired by the Black Lives Matter movement, this is a powerful and gripping novel about one girl's struggle for justice.

This book takes a look at fully automated, autonomous vehicles and discusses many open questions: How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are associated with automation and how will society respond to these risks? How will the marketplace react to automated vehicles and what changes may be necessary for companies? Experts from Germany and the United States define key societal, engineering, and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive, and scientifically sound treatment of the emerging field of “ autonomous driving”.

The emergence of severe acute respiratory syndrome (SARS) in late 2002 and 2003 challenged the global public health community to confront a novel epidemic that spread rapidly from its origins in southern China until it had reached more than 25 other countries within a matter of months. In addition to the number of patients infected with the SARS virus, the disease had profound economic and political repercussions in many of the affected regions. Recent reports of isolated new SARS cases and a fear that the disease could reemerge and spread have put public health officials on high alert for any indications of possible new outbreaks. This report examines the response to SARS by public health systems in individual countries, the biology of the SARS coronavirus and related coronaviruses in animals, the economic and political fallout of the SARS epidemic, quarantine law and other public health measures that apply to combating infectious diseases, and the role of international organizations and scientific cooperation in halting the spread of SARS. The report provides an illuminating survey of findings from the epidemic, along with an assessment of what might be needed in order to contain any future outbreaks of SARS or other emerging infections.

This newly reissued debut book in the Rutgers University Press Classics Imprint is the story of the search for a rocket propellant which could be trusted to take man into space. This search was a hazardous enterprise carried out by rival labs who worked against the known laws of nature, with no guarantee of success or safety. Acclaimed scientist and sci-fi author John Drury Clark writes with irreverent and eyewitness immediacy about the development of the explosive fuels strong enough to negate the relentless restraints of gravity. The resulting volume is as much a memoir as a work of history, sharing a behind-the-scenes view of an enterprise which eventually took men to the moon, missiles to the planets, and satellites to outer space. A classic work in the history of science, and described as “ a good book on rocket stuff...that ’ s a really fun one ” by SpaceX founder Elon Musk, readers will want to get their hands on this influential classic, available for the first time in decades.

The current generation, which features family saloons, practical Touring versions, delicious convertibles, and 'supercar' saloons, seems far removed from the earlier cars. However, upon closer inspection the lineage is clear, and the one theme that runs throughout is that these are true drivers' cars. James Taylor tells the story of the design, development and production of each generation, and includes coverage of the M3, Touring and convertible variants. Filled with full specs and production figures.
