The purpose of this report is to identify practices that have the potential to decrease the risk, as well as to reduce the number of injuries and deaths that occur while responding to and returning from incidents.

Launched in Nairobi in 1960, three years before the birth of independent Kenya, the Nation group of newspapers grew up sharing the struggles of an infant nation, suffering the pain of its failures and rejoicing in its successes. Marking its 50th anniversary in 2010, the Nation looks back on its performance as the standard-bearer for journalistic integrity and how far it fell short or supported the loyalty demanded by its founding slogan 'The Truth shall make you free'. The Aga Khan was still a student at Harvard University when he decided that an honest and independent newspaper would be a crucial contribution to East Africa's peaceful transition to democracy. The "Sunday Nation" and "Daily Nation" were launched in 1960 when independence for Kenya was not far over the horizon. They quickly established a reputation for honesty and fair-mindedness, while shocking the colonial and settler establishment by calling for the release of the man who could become the nation's first prime minister, Jomo Kenyatta, and early negotiations for 'Uhuru'. The history of the 'Nation' papers and that of Kenya are closely intertwined; in the heat of its printing presses and philosophical struggles, that story is told here: from committed beginnings to its position today as East Africa's leading newspaper group.

First Published in 1988. Routledge is an imprint of Taylor & Francis, an informa company.

The legacy of Alexander von Humboldt (1769-1859) looms large over the natural sciences. His 1799-1804 research expedition to Central and South America with botanist Aimé Bonpland set the course for the great scientific surveys of the nineteenth century, and inspired such essayists and artists as Emerson, Goethe, Thoreau, Poe, and Church. The chronicles of the expedition were published in Paris after Humboldt's return, and first among them was the 1807 "Essay on the Geography of Plants." Among the most cited writings in natural history, after the works of Darwin and Wallace, this work appears here for the first time in a complete English-language translation. Covering far more than its title implies, it represents the first articulation of an integrative "science of the earth, " encompassing most of today's environmental sciences. Ecologist Stephen T. Jackson introduces the treatise and explains its enduring significance two centuries after its publication.

Archery is one of the hottest sports out there, and there's no better introduction to the sport than Archery Fundamentals, Second Edition.
