He broke her heart all those years ago. Now he ' s living at her grandmother ' s B&B. Rebecca returns to her childhood home after her grandmother dies, only to discover her childhood sweetheart in residence... the same young man who disappeared on the night of their high school prom. As the truth about Mitch ' s disappearance is revealed, can they come to terms about what tore them apart?

An Instant New York Times Bestseller! Winner of the Coretta Scott King - John Steptoe for New Talent Author Award Filled with mystery and an intriguingly rich magic system, Tracy Deonn ' s YA contemporary fantasy Legendborn offers the dark allure of City of Bones with a modern-day twist on a classic legend and a lot of Southern Black Girl Magic. After her mother dies in an accident, sixteen-year-old Bree Matthews wants nothing to do with her family memories or childhood home. A residential program for bright high schoolers at UNC – Chapel Hill seems like the perfect escape—until Bree witnesses a magical attack her very first night on campus. A flying demon feeding on human energies. A secret society of so called “ Legendborn ” students that hunt the creatures down. And a mysterious teenage mage who calls himself a “ Merlin ” and who attempts—and fails—to wipe Bree ' s memory of everything she saw. The mage ' s failure unlocks Bree ' s own unique magic and a buried memory with a hidden connection: the night her mother died, another Merlin was at the hospital. Now that Bree knows there ' s more to her mother ' s death than what ' s on the police report, she ' ll do whatever it takes to find out the truth, even if

that means infiltrating the Legendborn as one of their initiates. She recruits Nick, a self-exiled Legendborn with his own grudge against the group, and their reluctant partnership pulls them deeper into the society ' s secrets—and closer to each other. But when the Legendborn reveal themselves as the descendants of King Arthur ' s knights and explain that a magical war is coming, Bree has to decide how far she ' ll go for the truth and whether she should use her magic to take the society down—or join the fight.

Amoral, cunning, ruthless, and instructive, this multi-million-copy New York Times bestseller is the definitive manual for anyone interested in gaining, observing, or defending against ultimate control – from the author of *The Laws of Human Nature*. In the book that *People* magazine proclaimed “beguiling” and “fascinating,” Robert Greene and Joost Elffers have distilled three thousand years of the history of power into 48 essential laws by drawing from the philosophies of Machiavelli, Sun Tzu, and Carl Von Clausewitz and also from the lives of figures ranging from Henry Kissinger to P.T. Barnum. Some laws teach the need for prudence (“ Law 1: Never Outshine the Master ”), others teach the value of confidence (“ Law 28: Enter Action with Boldness ”), and many recommend absolute self-preservation (“ Law 15: Crush Your Enemy Totally ”). Every law, though, has one thing in common: an interest in total domination. In a bold and arresting two-color package, *The 48 Laws of Power* is ideal whether your aim is conquest, self-defense, or simply to understand the rules of the game.

This book aims to explain air power to both military and civilian audiences in an accessible manner, approaching the topic in a balanced and systematic way. The past 100 years illustrates that air power is an inevitable feature of any type of modern warfare. It has a key role to play in any of the three main operational environments: conventional (inter-state) wars, peace-support operations, and counterinsurgencies. This book examines the strengths and challenges of using air power in these situations, and each type of operation is explained using modern and historical examples, with an emphasis on the relevant lessons for the contemporary and future use of air power. The book also looks into the complexity of media coverage of air warfare and changes in the public perception of air power in recent years. The specifics of structuring national air forces is also discussed, along with the future of air power based on current trends. One of the enduring themes in the book is the necessity of inter-service and cross-domain integration, emphasizing the increasingly important role of cyber and space domains in the future of network-centric warfare. This book will be essential reading for students of air power and air warfare, and recommended reading for students of international security, strategic studies, defence studies, and foreign policy.

"The text is suitable for a typical introductory algebra course, and was developed to be used flexibly. While the breadth of topics may go beyond what an instructor would cover, the modular approach and the richness of content ensures that the book meets the needs of a variety of programs."--Page 1.
