Each of the following chapters is followed by questions at the end based upon the text.

There Is Growing Awareness Of Environmental Pollution, But The Problem Of Abatement And Control Remains Unsolved. This Is Due To Lack Of Knowledge In Monitoring Methodology And Control Measures In Our Teaching Programmes. An Attempt Is Made In This Book To Fill Up This Gap. The Introductory Chapter Covers Grim Picture Of Pollution In India And Abroad. This Is Followed By Discussion On Choice Of Methods Of Monitoring And Brief Account Of Modern Methods Of Environmental Analysis. The Consideration Of Air Pollution Will Not Be Complete Without The Knowledge Of Air Pollution Meteorology And Monitoring And It Is Covered In Next Few Chapters. The Water Pollution Not Only Considers Mode Of Analysis But Also Of Treatment. The Challenging Problem Is Posed By Industrial Effluent And Sewage From The Viewpoint Of Treatment And Control. Agricultural Pollution Largely Encompasses Ill Effects Of Pesticides Which Are Separately Discussed. The Solid Waste, Hazardous Waste And Biomedical Waste Are New Problems Of This Century. An Upto Date Account On Their Characterisation, Treatment And Disposal Are Given Next Chapters. Noise Pollution. Thermal Pollution. Radiation Hazards Have Their Own Role To Play. Their Abatement Is Must. In spite Of Collecting Large Data On Pollution, Future Planning And Control Cannot Be Undertaken Without The Knowledge Of Environmental Impact Assessment And Environmental Modelling. These Topics Are Briefly Covered At End Of Book. This Book Should Be Indispensable For Graduate And Post-Graduate Programmes In Environmental Science And Engineering With Due Emphasis On Monitoring And Control. Adequate References Are Provided In Each Chapter And Also In Bibliography. This Will Help Serious Workers In Environmental Technology, Practising Chemist, And Environmental Engineers.

The Progress and Prosperity of any country mainly depend upon the quality of its human resource, which in turn, depends upon the quality of its educational system. Higher and technical education, being at the apex of the pyramid of education, play a major role in the overall development of any country. One of the major drawbacks of the higher and technical education in our country, is the palpable gap between the world of learning and the world of work.

A 25-year tradition of excellence is extended in the Fourth Edition of this highly regarded text. In clear, authoritative language, the authors discuss the philosophy and procedures for the design of air pollution control systems. Their objective is twofold: to present detailed information on air pollution and its control, and to provide formal design training for engineering students. New to this edition is a comprehensive chapter on carbon dioxide control, perhaps the most critical emerging issue in the field. Emphasis is on methods to reduce carbon dioxide emissions and the technologies for carbon capture and sequestration. An expanded discussion of control technologies for coal-fired power plants includes details on the capture of NO<sub>x</sub> and mercury emissions. All chapters have been revised to reflect the most recent information on U.S. air quality trends and standards. Moreover, where available, equations for equipment cost estimation have been updated to the present time. Abundant illustrations clarify the concepts presented, while numerous examples and end-of-chapter problems reinforce the design principles and provide opportunities for students to enhance their problem-solving skills.

A panel of respected air pollution control educators and practicing professionals critically survey the both principles and practices underlying control processes, and illustrate these with a host of detailed design examples for practicing engineers. The authors discuss the performance, potential, and limitations of the major control processes—including fabric filtration, cyclones, electrostatic precipitation, wet and dry scrubbing, and condensation—as a basis for intelligent planning of abatement systems. Additional chapters critically examine flare processes, thermal oxidation, catalytic oxidation, gas-phase activated carbon adsorption, and gas-phase biofiltration. The contributors detail the Best Available Technologies (BAT) for air pollution control and provide cost data, examples, theoretical explanations, and engineering methods for the design, installation, and operation of air pollution process equipment. Methods of practical design calculation are illustrated by numerous numerical calculations.
