An encyclopaedic guide to production techniques and materials for product and industrial designers, engineers, and architects. Today's product designers are presented with a myriad of choices when creating their work and preparing it for manufacture. They have to be knowledgeable about a vast repertoire of processes, ranging from what used to be known as traditional "crafts" to the latest technology, to enable their designs to be manufactured effectively and efficiently. Information on the internet about such processes is often unreliable, and search engines do not usefully organize material for designers. This fundamental new resource explores innovative production techniques and materials that are having an impact on the design industry worldwide. Organized into four easily referenced parts—Forming, Cutting, Joining, and Finishing—over seventy manufacturing processes are explained in depth with full technical descriptions; analyses of the typical applications, design opportunities, and considerations each process offers; and information on cost, speed, and environmental impact. The accompanying step-by-step case studies look at a product or component being manufactured at a leading international supplier. A directory of more than fifty materials includes a detailed technical profile, images of typical applications and finishes, and an overview of each material's design characteristics. With some 1,200 color photographs and technical illustrations, specially commissioned for this book, this is the definitive reference for product designers, 3D designers, engineers, and architects who need a convenient, highly accessible, and practical reference.

New in Paperback! Furniture design is a complex art. Traditionally, techniques of the craft have been passed down from master to apprentice, but these days that is less and less the case in contemporary design. Students are now required to take courses and figure out much of it themselves. This book, as with others in the Design Secrets series, takes readers into the studio and reveals tips and techniques as well as the inspiration that brought the concept to life. Many graphic and product designers are crossing into furniture design, including Karim Rashid, a designer of product, space, light, and fashion, and Todd Oldham, a photographer, graphic designer, product designer, interior designer, and influence in film/video and TV. Oldham is now the star designer at Lazy Boy—a company that has experienced a remarkable rebirth and revamp. Design Secrets: Furniture shadows similar success stories by showcasing award-winning furniture designs from around the world. Each profile is complete with sketches, notes, and interim iterations revealing how the final piece came to be.
