ELE Actual es la evolución de Nuevo ELE, un método de referencia para la enseñanza y aprendizaje del español como lengua extranjera Abarca los niveles A1, A2, B1 y B2 Enfoque comunicativo

El Cuaderno de ejercicios consta de quince lecciones correspondientes a las del Libro del alumno, con una amplia gama de ejercicios destinados a reforzar y ampliar el lenguaje presentado en el Libro del alumno. Son ejercicios escritos de práctica controlada, semicontrolada y libre, que han sido concebidos para trabajar de forma individual y pueden ser realizados en el aula o fuera de ella, según el criterio del profesor. Se incluyen asimismo, otros ejercicios de práctica oral controlada, acompañados de las grabaciones correspondientes, y actividades de autoevaluación. Para facilitar la labor del profesor y el trabajo personal del alumno, las soluciones de los ejercicios aparecen al final del cuaderno.

La Guía didáctica presenta los principios metodológicos en los que se apoya el curso y sugerencias para realizar las actividades del Libro del alumno obteniendo el máximo provecho de ellas. También se sugieren actividades alternativas que el profesor decidirá si se llevan a cabo o no teniendo en cuenta el grado de adquisición de los contenidos por parte de los alumnos, sus necesidades, las características de los miembros de la clase (circunstancias personales, experiencias, ideas, inquietudes, etcétera), así como el hecho de si el curso tiene lugar en un país de habla hispana o no. Excepto en la primera lección, en todas las demás se sugiere una actividad de "precalentamiento" que sirve para "romper el hielo", al principio de la clase, para activar a los alumnos, para repasar contenidos vistos en días anteriores o para introducir el tema que se va a tratar.Con el fin de facilitarle al profesor la consulta de la Guía didáctica y el trabajo continuado con ella, esta contiene todo el Libro del alumno reproducido. En cada una de las páginas de la guía el docente encontrará las actividades del libro y, al lado, las correspondientes sugerencias de explotación didáctica con todos los pasos detallados.La Guía didáctica incluye, además, las soluciones a las actividades del Libro del alumno y las transcripciones de los documentos auditivos con los que se trabaja en las actividades de comprensión auditiva propuestas en el libro.

This book provides an introduction to the mathematical and algorithmic foundations of data science, including machine learning, high-dimensional geometry, and analysis of large networks. Topics include the counterintuitive nature of data in high dimensions, important linear algebraic techniques such as singular value decomposition, the theory of random walks and Markov chains, the fundamentals of and important algorithms for machine learning, algorithms and analysis for clustering, probabilistic models for large networks, representation learning including topic modelling and non-negative matrix factorization, wavelets and compressed sensing. Important probabilistic techniques are developed including the law of large numbers, tail inequalities, analysis of random projections, generalization guarantees in machine learning, and moment methods for analysis of phase transitions in large random graphs. Additionally, important structural and complexity measures are discussed such as matrix norms and VC-dimension. This book is suitable for both undergraduate and graduate courses in the design and analysis of algorithms for data.

Previously published in hardcover: 2012.

The fundamental mathematical tools needed to understand machine learning include linear algebra, analytic geometry, matrix decompositions, vector calculus, optimization, probability and statistics. These topics are traditionally taught in disparate courses, making it hard for data science or computer science students, or professionals, to efficiently learn the mathematics. This self-contained textbook bridges the gap between mathematical and machine learning texts, introducing the mathematical concepts with a minimum of prerequisites. It uses these concepts to derive four central machine learning methods: linear regression, principal component analysis, Gaussian mixture models and support vector machines. For students and others with a mathematical background, these derivations provide a starting point to machine learning texts. For those learning the mathematics for the first time, the methods help build intuition and practical experience with applying mathematical concepts. Every chapter includes worked examples and exercises to test understanding. Programming tutorials are offered on the book's web site.
