probability for students who have some familiarity with basic calculus. Reflecting the author's philosophy that the best way to learn probability is to see it in action, there are more than 350 problems and 200 examples. The examples contain all the old standards such as the birthday problem and Monty Hall, but

also include a number of applications not found in other books, from areas as broad ranging as genetics, sports, finance, and inventory management.

In financial and actuarial modeling and other areas of application, stochastic differential equations with jumps have been
