The Heretics of Finance provides extraordinary insight into both the art of technical analysis and the character of the successful trader. Distinguished MIT professor Andrew W. Lo and researcher Jasmina Hasahodžic interviewed thirteen highly successful, award-winning market professionals who credit their substantial achievements to technical analysis. The result is the story of technical analysis in the words of the people who know it best; the lively and candid interviews with these gurus of technical analysis. The first half of the book focuses on the technicians' careers: How and why they learned technical analysis What market conditions increase their chances of making mistakes What their average workday is like To what extent trading controls their lives Whether they work on their own or with a team How their style of technical analysis is unique The second half concentrates on technical analysis and addresses questions such as these: Did the lack of validation by academics ever cause you to doubt technical analysis? Can technical analysis be applied to other disciplines? How do you prove the validity of the method? How has computer software influenced the craft? What is the role of luck in technical analysis? Are there laws that underlie market action? What traits characterize a highly successful trader? How do you test patterns before you start using them with real money? Interviews include: Ralph J. Acampora, Laszlo Birinyi, Walter Deemer, Paul Desmond, Gail Dudack, Robert J. Farrell, Ian McAvity, John Murphy, Robert Prechter, Linda Raschke, Alan R. Shaw, Anthony Tabell, Stan Weinstein.

Since Burton Malkiel's seminal work A Random Walk Down Wall Street was published, the financial world has swallowed whole the idea that market movement is chaotic and random. In Far from Random, Richard Lehman uses behavior-based trend analysis to debunk Malkiel's random walk theory. Lehman demonstrates that the market has discernible trends that are foreseeable. By learning to spot these trends, investors and traders can predict market movement to boost returns in anything from equities to 401(k) accounts. Richard Lehman has been a financial professional for more than thirty years. He studied the first iterations of behavioral finance back in the 1970s as a financial marketer and has since worked in various facets of the financial industry. His early introduction to behavioral finance and the more recent introduction to trend analysis led him to this important discovery.
