This book presents all the publicly available questions from the PISA surveys. Some of these questions were used in the PISA 2000, 2003 and 2006 surveys and others were used in developing and trying out the assessment.

Detailed plans for helping elementary students experience deep mathematical learning The mathematical tasks in this guide will challenge your youngest students to do deep problem-based learning. These ready-to-implement tasks connect concepts, skills, and practices and encourage students to reason, problem-solve, discuss, explore, justify, monitor their own thinking, and connect the mathematics they know to new situations. In other words, these tasks allow students to truly do mathematics! Written with a strengths-based lens, this guide includes: • Complete task-based lessons, referencing mathematics standards and practices, vocabulary, and materials • Downloadable planning tools, student resource pages, and thoughtful questions, and formative assessment prompts • Guidance on preparing, launching, facilitating, and reflecting on each task • Notes on access and equity, focusing on students' strengths, productive struggle, and distance or alternative learning environments

Engage students in mathematics using growth mindset techniques The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts. In this volume, you'll find a collection of low floor, high ceiling tasks that will help you do just that, by looking at the big ideas at the first-grade level through visualization, play, and investigation. During their work with tens of thousands of teachers, authors Jo Boaler, Jen Munson, and Cathy Williams heard the same message—that they want to incorporate more brain science into their math instruction, but they need guidance in the techniques that work best to get across the concepts they needed to teach. So the authors designed Mindset Mathematics around the principle of active student engagement, with tasks that reflect the latest brain science on learning. Open, creative, and visual math tasks have been shown to improve student test scores, and more importantly change their relationship with mathematics and start believing in their own potential. The tasks in Mindset Mathematics reflect the lessons from brain science that: There is no such thing as a math person - anyone can learn mathematics to high levels. Mistakes, struggle and challenge are the most important times for brain growth. Speed is unimportant in mathematics. Mathematics is a visual and beautiful subject, and our brains want to think visually about mathematics. With engaging questions, open-ended tasks, and four-color visuals that will help kids get excited about mathematics, Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards (CCSS) and can be used with any current curriculum.

All trainee teachers in England and Wales have to sit numeracy and literacy skills tests in order to achieve Qualified Teacher Status (QTS) which permits them to continue or start teaching. How to Pass the QTS Numeracy and Literacy Skills Tests includes both literacy and numeracy revision and mock tests. The numeracy section starts at a low level and includes a diagnostic test, a maths review, mental and general arithmetic practice, and revision of statistics. It gives the reader a good grounding in the skills needed to pass the test, particularly if maths has always been a weak subject or hasn't been revised in years. The literacy section includes practice material on spelling, punctuation, grammar and comprehension. It highlights the areas where people commonly have problems, and provides easy to follow explanations and practice questions and answers. Online supporting resources for this book include MP3 audio files to test mental arithmetics and sample numeracy tests.
