Barry Cunliffe here incorporates new theoretical approaches, technological advances and a range of new sites and finds, ensuring that Iron Age Communities in Britain remains the definitive guide to the subject.

The Iron Age in Northern Britain examines the archaeological evidence for earlier Iron Age communities from the southern Pennines to the Northern and Western Isles and the impact of Roman expansion on local populations, through to the emergence of historically recorded communities in the post-Roman period. The text has been comprehensively revised and expanded to include new discoveries and to take account of advanced techniques, with many new and updated illustrations. The volume presents a comprehensive picture of the 'long Iron Age', allowing readers to appreciate how perceptions of Iron Age societies have changed significantly in recent years. New material in this second edition also addresses the key issues of social reconstruction, gender, and identity, as well as assessing the impact of developer-funded archaeology on the discipline. Drawing on recent excavation and research and interpreting evidence from key studies across Scotland and northern England, The Iron Age in Northern Britain continues to be an accessible and authoritative study of later prehistory in the region.

The first millennium BC was a time of dramatic change in Europe, dominated by the emergence of Rome as a mega-state. Britain, on the periphery of these developments, witnessed huge social and economic change, seeing the end of the Bronze Age cycle of subsistence farming and the beginning of a more complex society which was to alter very little until the oceans were conquered in the 16th century. This book is a detailed study of these developments.

This book was written at a time when the older conventional diffusionist view of prehistory, largely associated with the work of V. Gordon Childe, was under rigorous scrutiny from British prehistorians, who still nevertheless regarded the 'Arras' culture of eastern Yorkshire and the 'Belgic' cemeteries of south-eastern Britain as the product of immigrants from continental Europe. Sympathetic to the idea of population mobility as one mechanism for cultural innovation, as widely recognized historically, it nevertheless attempted a critical re-appraisal of the southern British Iron Age in its continental context. Subsequent fashion in later prehistoric studies has favoured economic, social and cognitive approaches, and the cultural-historical framework has largely been superseded. Routine use of radiocarbon dating and other science-based applications, and new field data resulting from developer-led archaeology have revolutionized understanding of the British Iron Age, and once again raised issues of its relationship to continental Europe.

The Earlier Iron Age (c. 800–400 BC) has often eluded attention in British Iron Age studies. Traditionally, we have been enticed by the wealth of material from the later part of the millennium and by developments in southern England in particular, culminating in the arrival of the Romans. The result has been a chronological and geographical imbalance, with the Earlier Iron Age often characterised more by what it lacks than what it comprises: for Bronze Age studies it lacks large quantities of bronze, whilst from the perspective of the Later Iron Age it lacks elaborate enclosure. In contrast, the same period on mainland Europe yields a wealth of burial evidence with links to Mediterranean communities and so has not suffered in quite the same way. Gradual acceptance of this problem over the past decade, along with the corpus of new discoveries produced by developer-funded archaeology, now provides us with an opportunity to create a more balanced picture of the Iron Age in Britain as a whole. The twenty-six papers in the book seek to establish what we now know (and do not know) about Earlier Iron Age communities in Britain and their neighbours on the Continent. The authors engage with a variety of current research themes, seeking to characterise the Earlier Iron Age via the topics of landscape, environment, and agriculture; material culture and everyday life; architecture, settlement, and social organisation; and with the issue of transition – looking at how communities of the Late Bronze Age transform into those of the Earlier Iron Age, and how we understand the social changes of the later first millennium BC. Geographically, the book brings together recent research from regional studies covering the full length of Britain, as well as taking us over to Ireland, across the Channel to France, and then over the North Sea to Denmark, the Low Countries, and beyond.

A collection of essays by many of the leading specialists in the archaeology of the Iron Age and early Roman periods in Britain and western Europe, paying tribute to Professor Sir Barry Cunliffe. The subjects covered range over more than a thousand years, and from the Atlantic coasts to the eastern Mediterranean.
