This book examines the problem of theodicy arising from the fall of Jerusalem (587 B.C.E.) in the book of Jeremiah. It explores the ways in which the authors of the book of Jeremiah tried to explain away their God's responsibility while clinging to the idea of divine mastery over human affairs. In order to trace the development of a particular book's understanding of God's role in meting out punishments, this book analyzes all the

passages containing the word pivotal,????? ("to provoke to anger") in Deuteronomistic History and the book of Jeremiah.

At times when the IT manager's best friend is systems consolidation (which is a euphemism for centralisation), it may come somewhat as a surprise for you that this book investigates decentralisation in the context of content management systems. It may seem quite obvious that content will and should be managed by the party who creates and owns the

content, and hence should be held in a-somewhat-centralised and managed location. However, over the past few years, we have been witnesses of some important trends and developments which call for novel ways of thinking about content management and maybe even broader, about computer systems in general. First, ongoing business globalization creates natural distribution of information at a corp- ate level, as well as decentralization of control over business resources and business processes. Changing alliances with partners require ?exible architectures for content management that

can adapt to changing constellations, roles, and access rights. Second, the need for outsourcing and resource efficiency has brought about concepts of virtualization, recently culminating in the cloud computing buzzword. Virtualization of content management services requires - tremely scalable and flexible underlying information and communication architectures. These kinds of solutions are theoretically and practically impossible to implement based on centralised client-server architectures. Third, we are currently experiencing a dramatic shift in the roles of consumers in

the Internet. The times have gone when quality content was only delivered by publishers and news agencies. Wikis and other Web 2. 0 tools empower consumers to produce and publish their personal content.
