Academy Algebra 1 -  
Exam Answers Free

The cool thing about algebra is you can always get your answer and put it back into the original equation to make sure you are right. So the original equation was minus  $\frac{3}{4}$  times  $x$ , and here we'll substitute the  $x$  back into the equation. Wherever we

# Download Ebook Khan

saw  $x$ , we'll now put our answer. So it's minus  $40/39$ , and our original equation said that equals  $10/13$ . Well, and once again, when I just write ...

answered 04/29/19.

Effective and Patient

Math Tutor.  $c(n) =$

$-6 \cdot (-1/3)^{n-1}$ . The

variable  $n$  represents the

term number. So for the

second term,  $n = 2$ :  $c(2)$

$= -6 \cdot (-1/3)^{2-1} = \underline{\hspace{2cm}}?$
