I called my Kohler service company, and they said they'd come out to look at it, but I'd have to pay extra-premium "emergency" service rates because otherwise they couldn't dispatch anyone for two weeks because of their backlog. I reluctantly pre-approved the "emergency" rates because we'd been having daily severe storms, and we didn't want to risk an extended outage. The senior tech arrived ...

Revelations about U.S policies and practices of torture and abuse have captured headlines ever since the breaking of the Abu Ghraib prison story in April 2004. Since then, a debate has raged regarding what is and what is not acceptable behavior for the world's leading democracy. It is within this context that Angela Davis, one of America's most remarkable political figures, gave a series of interviews to discuss resistance and law, institutional sexual coercion, politics and prison. Davis talks about her own incarceration, as well as her experiences as "enemy of the state," and about having been put on the FBI's "most wanted" list. She talks about the crucial role that international activism played in her case and the case of many other political prisoners. Throughout these interviews, Davis returns to her critique of a democracy that has been compromised by its racist origins and institutions. Discussing the most recent disclosures about the disavowed "chain of command," and the formal reports by the Red Cross and Human Rights Watch denouncing U.S. violation of human rights and the laws of war in Guantánamo, Afghanistan and Iraq, Davis focuses on the underpinnings of prison regimes in the United States.

"Cognisant of the many facets of climate change, this report looks through the lens of economics, that is, the social science that measures the economic impact of climate change and the costs and benefits of trying to mitigate it and adapt to it. From an investment perspective, issues for study include the balance between investment in mitigating greenhouse-gas emissions and adaptation to climate change; the urgency and timing of investing in both; obstacles to investment; and policies to remove them and make investment profitable. From a growth perspective, issues of interest include the link between climate action and economic growth; the short-term and the long-term dimensions of this link; and the importance of innovation as an interface between climate action and economic growth. One of the key messages from this report is that there is unexploited scope for making Europe's climate action more efficient, growth-friendly, and in tune with fiscal constraints."--publisher's description.

Harness State-of-the-Art Computational Modeling Tools Computational Modeling of Pulverized Coal Fired Boilers successfully establishes the use of computational modeling as an effective means to simulate and enhance boiler performance. This text factors in how computational flow models can provide a framework for developing a greater understanding of the underlying processes in PC boilers. It also provides a detailed account of the methodology of computational modeling of pulverized coal boilers, as well as an apt approach to modeling complex processes occurring in PC boilers in a manageable way. *Connects Modeling with Real-Life Applications Restricted to the combustion side of the boiler* (the authors assume some prior background of reaction engineering and numerical techniques), the book describes the individual aspects of combustion and heat recovery sections of PC boilers that can be used to

further improve the design methodologies, optimize boiler performance, and solve practical boiler-related problems. The book provides guidelines on implementing the material in commercial CFD solvers, summarizes key points, and presents relevant case studies. It can also be used to model larger boilers based on conventional, super-critical, or ultra-super critical technologies as well as based on oxy-fuel technologies. Consisting of six chapters, this functional text: Provides a general introduction Explains the overall approach and methodology Explores kinetics of coal pyrolysis (devolatilization) and combustion and methods of its evaluation Presents computational flow modeling approach to simulate pulverized coal fired boiler Covers modeling aspects from formulation of model equations to simulation methodology Determines typical results obtained with computational flow models Discusses the phenomenological models or reactor network models Includes practical applications of computational modeling Computational Modeling of Pulverized Coal Fired Boilers explores the potential of computational models for better engineering of pulverized coal boilers, providing an ideal resource for practicing engineers working in utility industries. It also benefits boiler design companies, industrial consultants, R & D laboratories, and engineering scientists/research students.

Reviews "This volume brings together excellent scholarship and innovative policy discussion to demonstrate the essential role of higher education in the development of Africa and of the world at large. Based on deep knowledge of the university system in several African countries, this book will reshape the debate on development in the global information economy for years to come. It should be mandatory reading for academics, policy-makers and concerned citizens, in Africa and elsewhere." Manuel Castells, Professor Emeritus, University of California at Berkeley, Laureate of the Holberg Prize 2012 and of the Balzan Prize 2013 "The dominant global discourse in higher education now focuses on "world-class" universities " inevitably located predominantly in North America, Europe and, increasingly, East Asia. The rest of the world, including Africa, is left to play "catch-up". But that discourse should focus rather on the tensions, even contradictions, between "excellence" and "engagement" with which all universities must grapple. Here the African experience has much to offer the high-participation and generously resourced systems of the so-called "developed" world. This book offers a critical review of that experience, and so makes a major contribution to our understanding of higher education." Sir Peter Scott, former editor of Times Higher Education and Professor of Higher Education Studies, University College London, Institute of Education
