business Operational risk arises in all businesses. It is a broad term and can relate to internal processes, people, and systems, as well as external events. All listed companies, charities and the public sector must make risk judgements and assessments and company managers have an increasing responsibility to ensure that these assessments are robust and that risk management is at the heart of their organisations. In this practical guide, Tony Blunden and John Thirlwell, recognised experts in risk management, show you how to manage operational risk and

based decision making is only as good as the external evidence on which it is based. Financial models uncover potential risks on a company's balance sheet, but the complexity of these instruments has limited their effectiveness. Now, Mastering Financial Modeling offers a simplified method for building the fast and accurate financial models serious evidencebased decision makers need. What sets this practical guide apart is its "learning-on-the-job" approach. Unlike other books that teach modeling in a vacuum, this superior method uses a diverse collection of case

studies to convey each step  
of the building process.

"Learning on the job"

connects the dots between  
the proper Excel formulas  
and functions and the real-  
world situations where you  
want to use them. By  
learning through  
association, you can absorb  
the information quickly and  
have it ready to use when  
you need it. The book starts  
right off on building  
models--from creating a  
standalone cash flow model  
through integrating it with  
an income statement and  
balance sheet. Along the  
way, you will master the  
skill set you need to build  
advanced financial models.
