Modern DNA microarray technologies have evolved over the past 25 years to the point where it is now possible to take many million measurements from a single experiment. These two volumes, Parts A & B in the Methods in Enzymology series provide methods that will shepherd any molecular biologist through the process of planning, performing, and publishing microarray results. Part A starts with an overview of a number of microarray platforms, both commercial and academically produced and includes wet bench protocols for performing traditional expression analysis and derivative techniques such as detection of transcription factor occupancy and chromatin status. Wet-bench protocols and troubleshooting techniques continue into Part B. These techniques are well rooted in traditional molecular biology and while they require traditional care, a researcher that can reproducibly generate beautiful Northern or Southern blots should have no difficulty generating beautiful array hybridizations. Data management is a more recent problem for most biologists. The bulk of Part B provides a range of techniques for data handling. This includes critical issues, from normalization within and between arrays, to uploading your results to the public repositories for array data, and how to integrate data from multiple sources. There are chapters in Part B for both the debutant and the expert bioinformatician. Provides an overview of platforms Includes experimental design and wet bench protocols Presents statistical and data analysis methods, array databases, data visualization and meta analysis

The past two decades have seen an explosion in research on the synthesis of sesquiterpenes, an important class of hydrocarbons commonly found in oils, resins, and balsams. Volume Eleven in The Total Synthesis of Natural Products series continues to review this dynamic area of chemistry. It features systematic, A-to-Z coverage of sesquiterpenes synthesized between 1979-1994-a sesquidecade. Focusing on bicyclic and tricyclic compounds in sesquiterpene synthesis, this authoritative work complements Volume Ten's coverage of acyclic and monocyclic sesquiterpenes. The authors comb through the hundreds of sesquiterpene syntheses already developed, consolidating the multitude of research papers, and providing extensive references as well as author and subject indexes. To keep the presentation manageable, they emphasize literature where natural products were prepared, leaving out natural ring systems or compounds whose structures were misassigned. This volume presents multiple syntheses of the same compound in chronological order, making the various steps of the synthetic strategy easily accessible. In addition, it addresses one of the most important developments in sesquiterpene research, namely the increase in compound targets prepared in an optically active form. And while syntheses of racemates are not specifically marked, legends for synthesis schemes producing optically active compounds include their absolute configurations, signs of optical rotation, or both. An important resource for organic chemists, pharmaceutical and medicinal chemists, natural products chemists, and biochemists, The Total Synthesis of Natural Products offers valuable insight into the structure and makeup of sesquiterpenes

while serving as a practical tool for locating any of the major classes of sesquiterpene compounds. An invaluable guide for the chemist interested in natural products. Providing a fascinating, comprehensive look at sesquiterpene synthesis, Volume Eleven of The Total Synthesis of Natural Products reviews sesquiterpenes synthesized in the period 1979-1994, continuing the coverage begun with Volume Ten in the series (see below). This authoritative work: Focuses on bicyclic and tricyclic sesquiterpenes. Explains the structure and makeup of this important class of hydrocarbons. Serves as a useful, practical tool for researchers interested in locating any of the major classes of sesquiterpene compounds. Provides multiple syntheses of the same compound chronologically, clearly showing the evolution of the synthetic strategy. Also available . . . THE TOTAL SYNTHESIS OF NATURAL PRODUCTS Volume Ten, Edited by David Goldsmith. A complement to this work, Volume Ten examines compounds with acyclic and monocyclic ring structures in sesquiterpene synthesis. 1997 (0-471-59679-5) 173 pp.
