Introduction. Actual resuscitation guidelines are based on international consensus [1,2].In the last few years, chest compressions have gained greater relevance than breaths during CPR [], even to the point of recommending chest compressions only for bystander adult basic life support [].Nevertheless, experimental studies in animal models and clinical studies in children show that CPR with ...

Different Respiratory Rates during Resuscitation in a ...

ABG (Normal): pH: 7.35-7.45. PaO2: 80-100 mmHg. PaCO2: 35-45 mmHg. HCO3: 22-26 mEq/L. O2 sat: 95-100% (on room air) BE +/- 1. Lowest acceptable SBP for patients older than 1 yr = 70+ (2 x age in years) Cardiac arrest in the pediatric patient is also commonly due to progressive shock.

PALS Algorithms 2020 (Pediatric Advanced Life Support)

A respiratory rate of 20 to 30 breaths per minute is new for infants and children who are (a) receiving CPR with an advanced airway in place or (b) receiving rescue breathing and have a pulse. 1

Two Issues With the New PALS Guidelines | EMS World

This equates to approximately 1.5 inches (4 cm) in infants to 2 inches (5 cm) in children (Class IIa, LOE C-LD). Once children have reached puberty, the recommended adult compression depth of at least 5 cm, but no more than 6 cm, is used for the adolescent of average adult size (Class I, LOE C-LD). 16.

Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.

Pediatric Resuscitation is reviewed in this issue of Pediatric Clinics of North America, guest edited by Drs. Steve Schexnayder and Arno Zaritsky. Authorities in the field have come together to pen articles on Background and Epidemiology; CPR - Why the New Emphasis?; Airway Management; Arrhythmias, Cardioversion, and Defibrillation; Vascular Access and Medications; Medical Emergency Teams; Teamwork in Resuscitation; Resuscitation Education; Outcome Following Cardiac Arrest; Extracorporeal Life Support during CPR; Post-resuscitation Care; and Future Directions.

In the event of a paediatric cardiac arrest, it is essential to be able to respond rapidly, providing safe and effective care. This second edition of this successful text provides nurses with a practical and systematic guide to the rapid assessment and delivery of appropriate resuscitation to infants and children. Conforms to current European Resuscitation Council Guidelines Based on up-to-date research and evidence-based practice protocols Synoptic approach enables rapid delivery of effective treatment Written by experts in the field of both resuscitation and paediatrics Paediatric Advanced Life Support is a succinct yet comprehensive guide and is an essential purchase for any health professional likely to encounter an emergency situation.

Advances in Emergency Treatment Research and Application / 2012 Edition is a ScholarlyEditions™ eBook that delivers timely, authoritative, and comprehensive information about Emergency Treatment. The editors have built Advances in Emergency Treatment Research and Application / 2012 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Emergency Treatment in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Advances in Emergency Treatment Research and Application / 2012 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.

The Year Book of Pediatrics brings you abstracts of the articles that reported the year's breakthrough developments in pediatrics, carefully selected from more than 500 journals worldwide. Expert commentaries evaluate the clinical importance of each article and discuss its application to your practice. There's no faster or easier way to stay informed! This annual covers all aspects of pediatric care from infectious diseases and immunology, adolescent medicine, therapeutics and toxicology, child development, dentistry and otolaryngology and neurology and psychiatry. The Year Book of Pediatrics publishes annually in December of the preceding year.
