Development Control" is a comprehensive introductory text for students of planning and related subjects. Drawing widely on the literature - the approach and treatment are very much geared to the needs of students on courses, rather than focusing on practical and "how-to-do-it" issues. It should be of interest to students in schools of planning, the built environment, estate management, land economy and other related subjects.

"The statutory development control and planning law system of the United Kingdom is one of the most comprehensive and detailed in the world. Inevitably then, development control is one of the most significant matters concerning anyone involved in the development of land, and an understanding of the Acts, legislations and enforcement of said powers is essential to the success of any development project.This book is the fourth edition of a highly regarded work widely used by students and practitioners of real estate management, development, surveying, valuation, planning and law. Written by two experienced experts on law and the UK planning system, Development and Planning Law is essential reading for anyone involved in building and construction, surveying, planning, and development and who need to know the law as it relates to their every day professional practice. It has been extensively updated to reflect the most recent legal developments, including the 2011 Localism Act"--

The twin processes of planning and property development are inextricably linked – it’s not possible to carry out a development strategy without an understanding of the planning process, and equally planners need to know how real estate developers do their job. This third edition of Urban Planning and Real Estate Development guides students through the procedural and practical aspects of developing land from the point of view of both planner and developer. The planning system is explained, from the increasing emphasis on spatial planning at a regional level down to the detailed perspective of the development control process and the specialist requirements of historic buildings and conservation areas. At the same time the authors explain the entire development process from inception through appraisal, valuation and financing to completion and disposal. This is an invaluable textbook for real estate and planning students, and helps to meet the requirements of the RICS and RTPI Assessment of Professional Competence.
