The transmission speed of data communication systems is forecast to increase exponentially over the next decade. Development of both Si-based high-speed drivers as well as III-V-semiconductor-based high-speed vertical cavity surface emitting lasers (VCSELs) are prerequisites for future ultrahigh data-rate systems. This thesis presents: - a survey of the present state of the art of VCSELs - a systematic investigation of the various effects limiting present VCSELs - a catalogue of solutions to overcome present limits - detailed progress in modelling, fabricating and testing the currently most advanced VCSELs at the two commercially most important wavelengths.

When is a coloring book more than just a coloring book? When it's also a scavenger hunt, of course! When you open up the pages of this book, you'll find that you've been whisked away to a winter wonderland where reindeer fly high in the sky and an elf or two might just wander on by. With images that offer a delightful selection of all-things Christmas, you'll discover scenes that feature frosty snowmen who are bundled-up in their finest winter apparel as well as various woodland creatures preparing to celebrate the holiday season. As you color your way through this collection of images, be sure to search for the selection of items that have been tucked away for you to discover. Can you find them all and successfully complete this colorfully entertaining scavenger hunt?

This story is for everyone--but not everyone is for this story. It is a dangerous tale of times past. A love story full of deep seduction. A story of terrible longing and bold sacrifice. Then as now, evil begins its courtship cloaked in light. And the heart embraces what it should flee. Forgetting it once had a truer lover. With a kiss, evil will ravage body, soul, and mind. Yet there remains hope, because the heart knows no bounds. Love will prove greater than lust. Sacrifice will overcome seduction. And blood will flow. Because the battle for the heart is always violently opposed. For those desperate to drink deep from this fountain of life, enter. But remember, not everyone is for this story. "A heart-wrenching journey of redemption and hope that left me sobbing, laughing, and clinging to every word."--Donna McChristian, 44, Environmental Chemist

An examination of Italian immigrants and their children in the early twentieth century, *A New Language, A New World* is the first full-length historical case study of one immigrant group's experience with language in America. Incorporating the interdisciplinary literature on language within a historical framework, Nancy C. Carnevale illustrates the complexity of the topic of language in American immigrant life. By looking at language from the perspectives of both immigrants and the dominant culture as well as their interaction, this book reveals the role of language in the formation of ethnic identity and the often coercive context within which immigrants must negotiate this process.

"A highly recommended, character-driven sci-fi novel in the tradition of Robert A. Heinlein." -Kirkus Reviews "A fun story of survival and endurance that hits some metaphysical high notes and exudes a special feeling of "cool", *Exigency* is highly recommended to any big-hearted and sharp-minded reader in search of a sturdy sci-fi page-turner." -Red City Review Nine brilliant scientists travel light years on a one-way trip to an Earth-like planet. Their mission is to study from orbit the two species of intelligent lifeforms on the surface. The first: an isolated people embarking on civilization and building their world's first city. The second: a brutal race of massive predators, spread thick and still growing across the dominant landmass--destined to breed and eat their way to extinction within a few centuries. After eight years of observation, disaster strikes the orbiting station and only two crewmembers eject successfully. Drifting down through a dark alien sky, the pair realizes their escape pod launched not toward the safety of the city, but to the other side of the planet, touching down deep inside a land no human could possibly survive.

This dissertation provides the first systematic analysis of the dynamic energy efficiency of vertical-cavity surface-emitting lasers (VCSELs) for optical interconnects, a key technology to address the pressing ecological and economic issues of the exponentially growing energy consumption in data centers. Energy-efficient data communication is one of the most important fields in "Green Photonics" enabling higher bit rates at significantly reduced energy consumption per bit. In this thesis the static and dynamic properties of GaAs-based oxide-confined VCSELs emitting at 850 nm and 980 nm are analyzed and general rules for achieving energy-efficient data transmission using VCSELs at any wavelength are derived. These rules are verified in data transmission experiments leading to record energy-efficient data transmission across a wide range of multimode optical fiber distances and at high temperatures up to 85 °C. Important trade-offs between energy efficiency, temperature stability, modulation bandwidth, low current-density operation and other VCSEL properties are revealed and discussed.
