The police have the legal right to stop and search members of the public for a variety of reasons and using a number of powers. The main powers used require the officer to have reasonable grounds to suspect that the person stop searched is carrying a stolen or prohibited article. Other powers exist where an authorisation is required by a senior officer in relation to anticipated serious violence or terrorism.

Although laws governing moving-traffic violations are fairly uniform throughout the United States, the effective levels of enforcement of these laws vary dramatically from city to city. Basing this study on statistics from nearly seven hundred police departments, census data, personal interviews, on-the-spot observation, and detailed case studies of four Massachusetts cities--Lynn, Waltham, Malden, and Cambridge--Mr. Gardiner identifies and discusses the factors that determine police decisionmaking in relation to traffic violations. After a brief description of the role of various state and local agencies in settling traffic-enforcement policy, the author analyzes in depth the traffic activities of the four Massachusetts cities. He examines in particular the extent of public pressure in seeking modification of enforcement standards, intradepartmental practices, or "norms," and the role of traffic enforcement in the total spectrum of police activities. Following the case studies, the author discusses the variations among the traffic policies of municipal police departments, and questions the "public pressure" interpretation of police policies. Mr. Gardiner finds that, although citizens and city officials frequently seek to influence individual decisions, they seldom know how strict or lenient their department's general policies are, and seldom care. In addition, the author finds no significant connection between the severity of ticketing policies and such factors as income, race, or education, but does find some correlation with the geographical stability of a city's population. Finally, the author concludes that the chief source of departmental traffic policy is an internally established set of norms concerning the importance of traffic work and the frequency with which officers should write tickets. Evidence from cities that change their traffic policies indicates that individual preferences on the part of chiefs or ranking officers are the primary source of these norms. This book is an important contribution to the growing area in social sciences that deals with law enforcement and, more broadly, local political systems.

?????This Brief provides a clearly outlined and accessible overview of the challenges in creating and enforcing hate crime legislation in the United States. As the author explains, while it is generally not controversial that hate crime behavior should be stopped, the question of how to do so effectively is complex. This volume begins with an introduction about defining hate crimes, and the history of hate crimes and hate crime legislation in the United States. The author shows arguments in favor of hate crime statutes, for example: hate crimes reach beyond their victims to members of the victims' protected group and cohesion of society at large, and should therefore carry higher penalties.The author also shows arguments against hate crime statutes, for example that they sometimes contain enhanced penalties for certain specially protected groups and not others, and have a high potential for ambiguity and uneven enforcement. From a law enforcement perspective, the author explores the practical challenges in enforcing these statutes, and solutions to address them. Investigative techniques and resources vary significantly across police departments, as does training to identify and distinguish hate crimes from ordinary crimes. There is high potential for law enforcement and prosecutors' personal biases to effect the classification of crimes as hate crimes. Law enforcement organizations are constantly faced with the dilemma of what and how to enforce legislation. This brief will be relevant for researchers in criminology and criminal justice, policy makers involved in hate crime legislation, social justice, and police-community relations, as well as related fields such as sociology, public policy and demography.?

An investigation into the legal, political, and moral issues surrounding how the police and justice system use surveillance technology, asking the question: what are citizens of a free country willing to tolerate in the name of public safety? The police now have unparalleled power at their fingertips: surveillance technology. Seamless, persistent, even permanent surveillance is available - sometimes already deployed, sometimes waiting for the right excuse. Automatic license-plate readers allow police to amass a granular record of where people go, when, and for how long. Drones give police eyes--and possibly weapons--in the skies. Facial recognition poses perhaps the most dire and lasting threat than any other technology. Algorithms purport to predict where and when crime will occur, and how big a risk a suspect has of re-offending. Tools can crack a device's encryption keys, rendering all privacy protections useless. Embedding himself with both police and community activists in locales around the country - ranging from Newark, NJ and Baltimore, MD, to Los Angeles and Oakland, CA - Jon Fasman looks at how these technologies help police do their jobs, and what their use means for our privacy rights and civil liberties. We want safe streets and fewer criminals, but we also want to protect our privacy rights and civil liberties. Fasman provides a framing for thinking through through these issues, exploring questions like: should we expect to be tracked and filmed whenever we leave our homes? Should the state have access to all of the data we generate? Should private companies? What might happen if all of these technologies are combined and put in the hands of a government with scant regard for its citizens' civil liberties? Through on-the-ground reporting and vivid story-telling, Fasman explores the moral, legal, and political questions these surveillance tools and techniques pose.

"Why Law Enforcement Organizations Fail dissects headline cases to examine how things go wrong in criminal justice agencies. The author provides a framework for sorting through these cases to help readers recognize the distinct roles of operational mechanics, organizational structures, rank and file culture and executive hubris in making criminal justice agencies vulnerable to failure. The book examines how dysfunctions such as institutional racism, sexual harassment, systems abuse and renegade enforcement become established and then readily blossom into major scandals. This book is an excellent centerpiece for any class on police organization and management, criminal justice policy, or police-community relations"--

The Police Handbook on Searches, Seizures and Arrests summarizes landmark Supreme Court cases dealing with Miranda rights, the exclusionary rule, arrests and probable cause, searches, seizures, warrants and other subjects relevant to constitutional criminal procedure. Written with a target audience of police officers in mind, it is designed to guide state and local law enforcement in collecting evidence and collaborating with prosecutors without violating the rights enshrined in the United States Constitution. This is the essential procedural handbook for law enforcement officers seeking to guarantee citizens' rights and thus safeguard critical evidence from exclusion on the basis of constitutional violations. Carol J. Palmore, Esq. served in law enforcement for ten years before obtaining his juris doctor degree. He currently provides workshops to law enforcement officers and citizens on criminal procedure and citizens' rights.
