Presenting a pragmatic, evidence-based approach to conducting psychodynamic therapy, this engaging guide is firmly grounded in contemporary clinical practice and research. The book reflects an openness to new influences on dynamic technique, such as cognitive-behavioral therapy and positive psychology. It offers a fresh understanding of the most common problems for which patients seek help -- depression, obsessionality, low self-esteem, fear of abandonment, panic, and trauma -- and shows how to organize and deliver effective psychodynamic interventions. Extensive case material illustrates each stage of therapy, from engagement to termination. Special topics include ways to integrate individual treatment with psychopharmacology and with couple or family work.

This book includes the work of 22 contributing writers in addition to the three primary authors, John F. Clarkin, Ph.D., Peter Fonagy, Ph.D., and Glen O. Gabbard, M.D. Each contributor has extensive clinical experience, and some also have research experience, with the assessment and treatment of specific personality disorders.

This is a manual for clinicians who wish to learn an effective psychodynamic treatment for young people with personality disorders (PDs). The book details treatment models with strong theoretical foundations and examines systematic interventions designed to explore and resolve the conflicts and behaviors, common to PDs, that impede normal adolescent development.

guidelines, and a comparison of psychodynamic and cognitive models.

Psychodynamic Concepts in General Psychiatry brings together 37 nationally recognized psychodynamic psychiatrists who discuss in detail their understanding of how to work with specific types of patients. Separate chapters on clinical syndromes, including some of the most challenging that psychiatrists encounter--for example, in self-destructive, posttraumatic, and abused patients--provide both a historical review of dynamic perspectives and a detailed discussion of differential diagnosis and treatment selection for each disorder. Extensive clinical examples illustrating the underlying psychodynamic conflicts of patients with these disorders are presented as well. Also addressed in this volume are the psychological aspects of the settings in which therapy is practiced and the ways in which those settings affect both the psychiatrist and the patient. The final section contains chapters on current topics of particular relevance: the psychology of prescribing and taking medication, the meaning and impact of interruptions in treatment, and the provocative findings of new outcome research and cost-offset studies. The book closes with a recommended curriculum for training in psychodynamic psychiatry.
