experience as a way of advancing their own personal concerns and to draw substance from their reading and writing assignments. By enabling students to understand what it is they are being asked to write{u2014}from basic to complex communications{u2014}and how they can go about fulfilling those tasks meaningfully and successfully, this book helps students to develop themselves in all the ways the university offers. The Physical Geography of Southeast Asia examines the complex mosaic of physical environments which comprise Southeast Asia, and the current environmental problems and management practices which have arisen in this part of the world. The book is in three sections. The first section introduces the basic environmental components (geology, landforms, rivers, vegetation, and others) across the entire region. The second section discusses specific environments that are characteristic of this assemblage of continental and maritime landscapes (volcanic islands, coastal environment, granitic terrains, karst, etc.). The third and final section illustrates the ecological relationship between the environment and people (volcanic hazards, urban environment, coastal zone development, coral reefs, and others). The physical environment of Southeast Asia is examined at different levels, covering a world region that ranges from ancient, stable landmasses to dynamic, unstable plate

boundaries, from aged, primary rainforests to brash, vibrant, resource-demanding built environments. Southeast Asia has been perceived as a laboratory for studying plate tectonics. It is an assemblage of large river basins, peninsulas and archipelagos, and seas surrounded by islands. It is an area of great physical variations where parts of the physical environment have been significantly degraded anthropogenically, following rapid population growth and development. In large parts of the region, the forms and processes on land and offshore should no longer be seen as entirely natural. As this book repeatedly illustrates, plate tectonics and people are both important contributors to the physical geography of Southeast Asia. The contributors to this volume are distinguished, scholarly, and have a long association with Southeast Asia. The chapters are not only skilfully built on state-of-the-art research findings but also include new material from the on-going research activities of the authors. The book goes beyond being the first comprehensive and detailed volume of the biophysical geography of Southeast Asia in that it also deals with the tropical environment and the relationship between environment and people in a rapidly developing world region.

"Science and Empires - Historical Studies about Scientific Development and European Expansion" is the product of an International Colloquium, "Sciences and Empires - A Comparative History of Scientific Exchanges: European Expansion and Scientific Development in Asian, African, American and Oceanian Countries". Organized by the REHSEIS group (Research on Epistemology and History of Exact Sciences and Scientific Institutions) of CNRS (National Center for Scientific Research), the colloquium was held from 3 to 6 April 1990 in the UNESCO building in Paris. This colloquium was an idea of Professor Roshdi Rashed who initiated this field of studies in France some years ago, and proposed "Sciences and Empires" as one of the main research programmes for the The project to organize such a colloquium was a bit REHSEIS group. of a gamble. Its subject, reflected in the title "Sciences and Empires", is not a currently-accepted sub-discipline of the history of science; rather, it refers to a set of questions which found autonomy only recently. The terminology was strongly debated by the participants and, as is frequently suggested in this book, awaits fuller clarification.

If Phonetics is a comparatively recent subject for European students of foreign languages and is eyed by them with some suspicion as an invention that is meant to make their studies difficult, it is even more so with English Phonetics for African students. Have not Africans been learning English for over a century, and with good results in many cases, without giving a thought to its phonetics? Why introduce this new subject and add to the number of books they have to read and the number of examinations they have to pass before they can get their degree? Yet if the study of a foreign language is to be up to date its phonetics cannot be

neglected; on the contrary, it is as important as the study of its spelling, if not more so. With the invention of radio and telephone, of gramophone and tape-recorders, the importance of the spoken word has increased immensely and it is far more essential now than it was a hundred years ago that those who learn a foreign language should learn to speak it properly. Thus a new subject has been added to the schedule of language students and teachers: the study and practice of the sounds of the language, and for the teachers also the study of how to teach these sounds.

A Great Burst Of Globalization brought the 20th century to a close, creating upheaval in the world economy from roughly 1995 to 2008. And now, with the new century barely commenced, a second upheaval is in the offing following the severe financial crisis that plunged the global economy into recession in 2008-09. The first upheaval witnessed a massive migration of manufacturing and certain business services that transformed Asia into the industrial heartland of the world. The second upheaval will likely consolidate Asia's industrial preeminence and could result in a concentration of industrial activities in the two most populous and fastest-growing Asian economies---China and India. As the two Asian giants become the industrial equals of the United States, Germany, and Japan, the ramifications will affect trade and growth worldwide, the future of development in China and India, and industrialization throughout Asia. Changing the Industrial Geography in Asia: The Impact of China and India examines these developments, focusing specifically on China and India. Its analysis and conclusions will be of

particular interest to policy makers and academics, as well as anyone with an interest in how China and India are likely to reshape industry throughout Asia. "Changing the Industrial Geography in Asia is rich in detailed analysis of the continuing transformation of the manufacturing sector in Asia, both in terms of its moving geography and its composition. For those interested in understanding the prospects of post-financial crisis Asia, this book is a must read. It is a refreshing return to economic fundamentals, including the new problems of climate change and dwindling energy resources, and will remain the leading reference on Asian transformation for a long time to come." "The authors consolidate a remarkable amount of data and analysis on the industrial structure of Asia and its emergence as the industrial center of the global economy."

A fun-filled introduction to maps through the eyes of an adorable pig Henry is a very particular sort of pig. "A place for everything and everything in its place," he always says. But when he looks out his window he is troubled. The farm is a mess! Henry is worried that nobody will be able to find anything in this mess. So he draws a map showing all the animals exactly where they belong. And Henry embarks on a journey through the farm, his friends tagging along as he creates his map: sheep in the woolshed, chickens in the coop, the horse in the stable. After the map is complete, Henry uses it to bring himself back home, where he is relieved to know that he is exactly where he belongs. A place for everything and everything in its place, indeed. For fans of Zen Shorts by Jon J. Muth or of Winnie the Pooh, this sweet romp through the farm is adorably illustrated by David Elliot, who created the endearing animals who inhabit Brian Jacques world of Redwall. Perfect for pre-schoolers and elementary-schoolers learning to read
