Award winning author Suzanne Church's cast of distinct characters asks "What if?" in this collection of science fiction, fantasy, and horror short fiction. Church infuses emotion into every tale. Whether quirky or horrific, the prose deftly snatches the reader onto a whirlwind expedition of laughter and sorrow. This collection includes 21 stories and an introduction by award winning author, editor, and poet, Sandra Kasturi.

The Murder on the Links is Agatha Christie's second Poirot novel, featuring the brilliant Belgian detective and his sidekick, Captain Hastings. In this characteristic whodunit, Poirot is summoned to a seaside town in northern France by a desperate letter from a rich businessman, who fears that he is being stalked. Poirot arrives to find the businessman already dead, his body lying facedown in an open grave on a golf course, a knife in his back—the victim of a mysterious murder. Over the coming days Poirot clashes wits with an arrogant Parisian detective, Giraud, while Hastings finds himself pining after a beautiful but shadowy American expatriate known to him only as "Cinderella." Together, Poirot and Hastings unravel the intricate web of mystery and deceit behind the murder. Christie based this mystery after a real-life French murder case, and it's believed that this is the first detective novel to use the phrase "the scene of the crime." This book is part of the Standard Ebooks project, which produces free public domain ebooks.

Microsoft Azure Essentials from Microsoft Press is a series of free ebooks designed to help you advance your technical skills with Microsoft Azure. This third ebook in the series introduces Microsoft Azure Machine Learning, a service that a developer can use to build predictive analytics models (using training datasets from a variety of data sources) and then easily deploy those models for consumption as cloud web services. The ebook presents an overview of modern data science theory and principles, the associated workflow, and then covers some of the more common machine learning algorithms in use today. It builds a variety of predictive analytics models using real world data, evaluates several different machine learning algorithms and modeling strategies, and then deploys the finished models as machine learning web services on Azure within a matter of minutes. The ebook also expands on a working Azure Machine Learning predictive model example to explore the types of client and server applications you can create to consume Azure Machine Learning web services. Watch Microsoft Press's blog and Twitter (@MicrosoftPress) to learn about other free ebooks in the Microsoft Azure Essentials series.

This fourth title in a unique series that combines reference and analytical qualities in chronicling the horror and science fiction genres, Horror and Science Fiction Films IV brings the earlier three volumes in the series up to date, concentrating on the period from 1984-1994, as well as updating entries from the previous volumes and adding newly-discovered titles from 1900-1983. Entries in the main list include credits, cast, synopsis, and annotation. The introduction lists 1995 releases in the genres and 1996 releases through the summer, cites the more memorable films in the genres for both the current period and 1900-1984, and serves as an index to key titles in the main list, including long-lost titles such as the -obscure silent Were Tiger and the 1931 The Phantom. Willis includes many films from around the world that are not found in any other English-language film reference work. One appendix provides thumbnail descriptions of problem and peripheral films; another updates entries in the first three books with alternate titles; and a third appendix serves as an index to the approximately 7,000 films listed in the first three volumes in the series as well as in the current volume, thus bringing the total number of films covered in this series to roughly 11,000 titles.

New York Times Bestseller: This retelling of the Greek myth of Theseus, king of Athens, is "one of the truly fine historical novels of modern times" (The New York Times). In myth, Theseus was the slayer of the child-devouring Minotaur in Crete. What the founder-hero might have been in real life is another question, brilliantly explored in The King Must Die. Drawing on modern scholarship and archaeological findings at Knossos, Mary Renault's Theseus is an utterly lifelike figure—a king of immense charisma, whose boundless strivings flow from strength and weakness—but also one steered by implacable prophecy. The story follows Theseus's adventures from Troizen to Eleusis, where the death in the book's title is to take place, and from Athens to Crete, where he learns to jump bulls and is named king of the victims. Richly imbued with the spirit of its time, this is a page-turner as well as a daring act of imagination. Renault's story of Theseus continues with the sequel The Bull from the Sea. This ebook features an illustrated biography of Mary Renault including rare images of the author.

The first edion was called "the most valuable film reference in several years" by Library Journal. The new edition published in hardcover in 2001 includes more than 670 entries. The current work is a paperback reprint of that edition. Each entry contains a mini-essay that defines the topic, followed by a chronological list of representative films. From the Abominable Snowman to Zorro, this encyclopedia provides film scholars and fans with an easy-to-use reference for researching film themes or tracking down obscure movies on subjects such as suspended animation, viral epidemics, robots, submarines, reincarnation, ventriloquists and the Olympics ("Excellent" said Cult Movies). The volume also contains an extensive list of film characters and series, including B-movie detectives, Western heroes, made-for-television film series, and foreign film heroes and villains.

As the gap between science fiction and science fact has narrowed, films that were intended as pure fantasy at the time of their premier have taken on deeper meaning. This volume explores neuroscience in science fiction films, focusing on neuroscience and psychiatry as running themes in SF and finding correlations between turning points in "neuroscience fiction" and advances in the scientific field. The films covered include The Strange Case of Dr. Jekyll and Mr. Hyde, The Island of Dr. Moreau, Robocop, The Stepford Wives, The Mind Snatchers and iconic franchises like Terminator, Ironman and Planet of the Apes. Examining the parallel histories of psychiatry, neuroscience and cinema, this book shows how science fiction films offer insightful commentary on the scientific and philosophical developments of their times.

Thirty-five years in the making, and destined to be the last word in fanta-film references! This incredible 1,017-page resource provides vital credits on over 9,000 films (1896-1999) of horror, fantasy, mystery, science fiction, heavy melodrama, and film noir. Comprehensive cast lists include: directors, writers, cinematographers, and composers. Also includes plot synopses, critiques, re-title/translation information, running times, photographs, and several cross-referenced indexes (by artist, year, song, etc.). Paperback.
