Rocketfish - 90W AC Power Adapter for Most Laptop PCs - Black. Model: RF-BPRAC4 Product Support & Downloads

An application of differential forms for the study of some local and global aspects of the differential geometry of surfaces. Differential forms are introduced in a simple way that will make them attractive to "users" of mathematics. A brief and elementary introduction to differentiable manifolds is given so that the main theorem, namely Stokes' theorem, can be presented in its natural setting. The applications consist in developing the method of moving frames expounded by E. Cartan to study the local differential geometry of immersed surfaces in R3 as well as the intrinsic geometry of surfaces. This is then collated in the last chapter to present Chern's proof of the Gauss-Bonnet theorem for compact surfaces.

With this book, the authors support content-area and language arts teachers alike by pairing more than 75 short, kid-tested reproducible nonfiction texts with 33 simple, ready-to-go lessons that deepen comprehension and support effective collaboration.--[book cover]
