Michael S. Gazzaniga, one of the most important neuroscientists of the twentieth century, gives us an exciting behind-the-scenes look at his seminal work on that unlikely couple, the right and left brain. Foreword by Steven Pinker. In the mid-twentieth century, Michael S. Gazzaniga, “the father of cognitive neuroscience,” was part of a team of pioneering neuroscientists who developed the now foundational split-brain brain theory: the notion that the right and left hemispheres of the brain can act independently from one another and have different strengths. In *Tales from Both Sides of the Brain*, Gazzaniga tells the impassioned

story of his life in science and his decades-long journey to understand how the separate spheres of our brains communicate and miscommunicate with their separate agendas. By turns humorous and moving, *Tales from Both Sides of the Brain* interweaves Gazzaniga's scientific achievements with his reflections on the challenges and thrills of working as a scientist. In his engaging and accessible style, he paints a vivid portrait not only of his discovery of split-brain theory, but also of his comrades in arms—the many patients, friends, and family who have accompanied him on this wild ride of intellectual discovery.

The solution research neurologist Kosik and medical journalist Clegg propose reads like the opening round in what they clearly hope will become a national dialogue about optimizing treatment for people with dementia, including Alzheimer's disease... Cogent, thorough, and convincing. -BooklistAs the Baby Boomer generation moves into the ranks of the elderly in the next decade or two, the number of Alzheimer cases expected to develop will be staggering. Since current medical care cannot offer a cure, and even significantly effective treatment is at least ten years away, there is a pressing need for novel solutions to address the multifaceted issues raised by this devastating disease. This book offers a measure of hope and coping strategies for people facing Alzheimer's now or in the future. Authors

Kenneth S. Kosik, MD, a neurologist and a leading Alzheimer's researcher, and experienced healthcare journalist Ellen Clegg propose the creation of community centers devoted to Alzheimer's. Here patients and their families could access programs of care, treatment, and most importantly, prevention, outside of the traditional medical setting. They outline a bold vision of one-stop centers that would provide expertise and reliable information on a range of topics: pharmaceutical developments, dietary regimens, physical and cognitive exercise programs that may help to slow the disease process, and palliative measures to reduce suffering. Most important, the centers they describe would take a family-oriented, personalized approach to care and prevention, creating an atmosphere conducive to adult learning and facilitating personal growth in areas that patients have enjoyed over a lifetime, including the arts, dance, socializing, and a host of other possibilities. The authors explain why the current healthcare system is poorly equipped to deal with Alzheimer patients, why the standard medical model is inappropriate for cognitive disorders, how market economics stymies physician creativity, and how new initiatives that work outside the existing system could go a long way toward providing the help that is lacking today. For people prepared to take action now to prevent Alzheimer's, as well as healthcare
