Target 3 Billion: Innovative Solutions Towards
Sustainable Development talks about the 3 billion
people across the globe who live in villages and are
often deprived of basic resources. The authors explain
how the global model of development has failed to
eradicate poverty.

What is it that we as a nation are missing? Why, given
all our skills, resources and talents, do we settle so
often for the ordinary instead of striving to be the best?
At the heart of Ignited Minds is an irresistible premise:
that people do have the power, through hard work, to
realize their dream of a truly good life. Kalam ' s vision
document of aspiration and hope motivates us to
unleash the dormant energy within India and guide the
country to greatness.

#1 NEW YORK TIMES BEST SELLER • In this urgent, authoritative book, Bill Gates sets out a wide-ranging, practical—and accessible—plan for how the world can get to zero greenhouse gas emissions in time to avoid a climate catastrophe. Bill Gates has spent a decade investigating the causes and effects of climate change. With the help of experts in the fields of physics, chemistry, biology, engineering, political science, and finance, he has focused on what must be done in order to stop the planet's slide to certain environmental disaster. In this book, he not only explains why we need to work toward net-zero emissions of greenhouse gases, but also details what we need to do to achieve this profoundly important goal. He gives us a clear-eyed description of the challenges we face. Drawing on his understanding of innovation and what it takes to get new ideas into the market, he describes the areas in which technology is already helping to reduce emissions, where and how the current technology can be made to function more effectively, where breakthrough technologies are needed, and who is working on these essential innovations. Finally, he lays out a concrete, practical plan for achieving the goal of zero emissions—suggesting not only policies that governments should adopt, but what we as individuals can do to keep our government, our employers, and ourselves accountable in this crucial enterprise. As Bill Gates makes clear, achieving zero emissions will not be simple or easy to do, but if we follow the plan he sets out here, it is a goal firmly within our reach.

billion people across the globe who live in villages and are often deprived of basic resources. It integrates the challenges and opportunities of the present human civilization and elaborates on providing Urban Amenities in Rural Areas (PURA), a sustainable and environment-friendly system that will uplift the rural masses. The authors pose the question-what can I do to empower 3 billion people? The answers have been provided from the perspectives of citizens, students and senior citizens. India 2020: A Vision for the New Millennium: The authors offer a blueprint for India to be counted among the world's top five economic powers by the year 2020. They cite growth rates and development trends to show that the goal is not unrealistic. Past successes-the green revolution and satellite-based communication linking remote regions of the country, for instance bear them out. Beyond 2020: A Vision for Tomorrow's India: Kalam and Rajan argue that a renewed policy focus is now needed for agriculture, manufacturing, mining, the chemicals industry, healthcare and infrastructure to invigorate these sectors and boost economic growth. India can still make it to the list of developed nations in a decade.

Nuclear capability; self-sufficiency in food production; an array of indigenous satellites and missiles; an unmanned Moon mission—India ' s achievements in the scientific domain in recent years have been spectacular. But; according to the country ' s best-known scientist A.P.J. Abdul Kalam and his close associate Y.S. Rajan; we ' ve only just begun. In a century that many experts predict may belong to India; the realization of the vision of a better future for everyone will require a keen understanding of our

needs and this can only be achieved by tailoring our research and innovations to the goal of national development. India to the forefront of the world in the decades to come. The Scientific Indian will speak to every curious and adventurous mind; and especially to tomorrow ' s scientists and technologists; encouraging us to dream big; and urging us to work hard to make our dreams come true. In The Scientific Indian; the authors of the path-breaking India 2020: A Vision for the New Millennium return after ten years to the core areas of scientific advancement that are crucial today: space exploration; satellite technology; missile development; earth and ocean resources; the biosphere; food production; energy and water harvesting; health care and communications; to name a few. For each aspect; the authors provide the context of recent progress on the global platform as well as Indian breakthroughs; before outlining a pragmatic vision of technological development that will propel

As we aspire for rising economic prosperity and a strong and confident India, this book forcefully reminds us of the values that make for a truly sustainable society, at the heart of which is the family. For it is not economic growth or military strength alone that will make India strong. Sustainable success comes from values, and these can sustain a society and a nation even in times of hardship. The book expresses an ideal by which Indian society may prosper and speaks of how spirituality can help create a noble nation and a better world. It provides a valuable counterpoint to the modern-day emphasis on consumerism and the philosophy of more is better, highlighting the sanctity of the natural world and its great power to evoke

human creativity and love. Writing on this crucial subject are two iconic Indians. Together, Acharya Mahapragya and A.P.J. Abdul Kalam- one a Jain muni revered as a saint, the other a visionary, a distinguished scientist and a former President of India- bringing their vast experience to bear on this important subject. As the authors put it, it's only a united and happy family that will lead to a strong nation, one that can be a true fulfilment of 5,000 years of India's civilization. The book takes up the difficult and pressing task of setting a new agenda in a time of radical social change. It shows us the path we need to follow to take India to its rightful place as a great nation.

On the way from Delhi to Jaunpur in eastern Uttar Pradesh is the dusty town of Badshahpur. Even in this nondescript settlement, people receive money via mobile transfer from family members working in distant cities. There are computer training centres offering diploma courses in Bhojpuri, Hindi and English. Here is an example of India's numerous remote towns that have skipped the stage of basic learning and landed straight into digital literacy as they strive to keep up with the times. In his last book, A.P.J. Abdul Kalam, writing with Srijan Pal Singh, draws upon examples ranging from entrepreneurship in places like Badshahpur to a sophisticated missile programme like Agni to show how it can be 'Advantage India' in the final lap of the journey to 2020-the landmark year by which he had envisioned the country could transform into an economic power. How can the new initiatives-such as Make in India, Swachh Bharat, smart cities and skill development for the youth-be used to unleash the country's vast potential? Advantage India offers the answer-a

movement driven by every home and school to educate the new generation and give a fresh meaning to citizenship.

India 2020 is about to become a reality. Are we ready? As Dr Kalam and Y.S. Rajan had contended in their landmark vision document, India 2020, India has steadily moved towards becoming one of the top five economic powers in the twenty-first century. India ' s growth story has seen new opportunities and emerging technologies that make faster and more inclusive growth viable. In Beyond 2020, Kalam and Rajan argue that a renewed policy focus is now needed for agriculture, manufacturing, mining, the chemicals industry, healthcare and infrastructure to invigorate these sectors and boost economic growth. India can still make it to the list of developed nations in a decade. This timely book provides an action plan for that transformation.

• New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world “ At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope. ” —Per Espen Stoknes, Author, What We Think About When We Try Not To Think About Global Warming “ There ' s been no real way for ordinary people to get an understanding of

what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom.” —David Roberts, Vox “ This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook. ”

—Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth ’ s warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

Describes the state of postwar development policy in Africa that has channeled billions of dollars in aid but failed to either reduce poverty or increase growth, offering a hopeful vision of how to address the problem.
