Management decisions on appropriate practices and policies regarding tropical forests often need to be made in spite of innumerable uncertainties and complexities. Among the uncertainties are the lack of formalization of lessons learned regarding the impacts of previous programs and projects. Beyond the challenges of generating the proper information on these impacts, there are other difficulties that relate with how to socialize the information and knowledge gained so that change is transformational and enduring. The main complexities lie in understanding the interactions of social-ecological systems at different scales and how they varied through time in response to policy and other processes. This volume is part of a broad research effort to develop an independent evaluation of certification impacts with stakeholder input, which focuses on FSC certification of natural tropical forests. More specifically, the evaluation program aims at building the evidence base of the empirical biophysical, social, economic, and policy effects that FSC certification of natural forest has had in Indonesia as well as in other tropical countries. The contents of this volume highlight the opportunities and constraints that those responsible for managing natural forests for timber production have experienced in their efforts to improve their practices. As such, the goal of the studies in this volume is to serve as the foundation to design an impact evaluation framework of the impacts of FSC certification of natural forests in a participatory manner with interested parties, from institutions and organizations, to communities and individuals.

This book covers the sustainable tropical agriculture, sustainable tropical animal production and health, sustainable tropical forestry, socio-economic dimension in tropical agriculture and innovative and emerging food technology and management as chapters in this book. The common challenging problems in plant, animal, and fisheries production in the tropic are climate change, inefficiency production system, low technological innovation, decreasing environment quality, and the outbreak risk of pest and diseases.

Ekosistem mangrove merupakan salah satu jenis sumber daya alam yang menjadi target konservasi, dari berbagai potensi sumber daya alam yang ada. Berdasarkan hasil penelusuran literatur, bermacam-macam karakter ekologi mangrove pada berbagai negara dan daerah pantai di Indonesia sekarang telah banyak dikaji oleh para ahli. Namun demikian ternyata aspek ekologi mangrove pada pulau-pulau kecil, sampai saat ini belum banyak diungkap. Buku ini berisi 11 (sebelas) bagian pembahasan, yang di antaranya membahas tentang Ekosistem Mangrove, Fungsi Ekosistem Mangrove, Distribusi dan Komposisi Mangrove, Struktur Vegetasi Tegakan Mangrove, Zonasi Mangrove, Regenerasi Vegetasi Mangrove, Faktor Lingkungan Vegetasi Mangrove, Karakteristik Ekosistem Mangrove di Pulau Kaledupa Provinsi Sulawesi Tenggara, Karakteristik Ekosistem Mangrove di Pulau Derawa Provinsi Sulawesi Tenggara, Karakteristik

Ekosistem Mangrove di Pulau Hoga Provinsi Sulawesi Tenggara, dan Karakteristik Ekosistem Mangrove di Taman Nasional Wakatobi Provinsi Sulawesi Tenggara. Decentralization is sweeping the world and having dramatic and far-reaching impacts on resource management and livelihoods, particularly in forestry. This book is the most up-to-date examination of the themes, experiences and lessons learned from decentralization worldwide. Drawing on research and support from all of the major international forestry and conservation organizations, the book provides a balanced account that covers the impact of decentralization on resource management worldwide, and provides comparative global insights with wide implications for policy, management, conservation and resource use and planning. Topics covered include forest governance in federal systems, democratic decentralization of forests and natural resources, paths and pitfalls in decentralization and biodiversity conservation in decentralized forests. The book provides in-depth case studies of decentralization from Bolivia, Ghana, Indonesia, Russia, Scotland, Switzerland, Uganda and the US, as well as highlights from federal countries including Australia, Brazil, Canada, India and Malaysia. It also addresses the critical links between the state, forests, communities and power relations in a range of regions and circumstances, and provides case examples of how decentralization has been viewed and experienced by communities in Guatemala, Philippines and Zimbabwe. The Politics of Decentralization is state-of-the-art coverage of decentralization and is essential for practitioners, academics and policy-makers across forestry and the full spectrum of natural resource management.

A concise, descriptive overview of mangrove plants, with emphasis on individual species.

This country profile reviews the drivers of deforestation and forest degradation in Indonesia, sets out the institutional, political and economic environment within which REDD+ is being implemented in Indonesia, and documents the process of national REDD+ policy development during the period 2007 – early 2012. While Indonesia is committed at the national and international level to addressing climate change through the forestry sector, there are clearly contextual challenges that need to be addressed to create the enabling conditions for REDD+. Some of the major issues include inconsistent legal frameworks, sectoral focus, unclear tenure, consequences of decentralisation, and weak local governance. Despite these challenges, however, REDD+ opens up an opportunity for improvements in forest governance and, more broadly, in land use governance. More democratic political-economic processes in general, greater freedom of civil society and the press, and heightened awareness of environmental issues can help build support and solidify policies in this direction.

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

Forest Management and Planning, Second Edition, addresses contemporary forest management planning issues, providing a concise, focused resource for those in forest management. The book is intermixed with chapters that concentrate on quantitative subjects, such as economics and linear programming, and qualitative chapters that provide discussions of important aspects of natural resource management, such as sustainability. Expanded coverage includes a case study of a closed canopy, uneven-aged forest, new forest plans from South America and Oceania, and a new chapter on scenario planning and climate change adaptation. Helps students and early career forest managers understand the problems facing professionals in the field today Designed to support land managers as they make complex decisions on the ecological, economic, and social impacts of forest and natural resources Presents updated, real-life examples that are illustrated both mathematically and graphically Includes a new chapter on scenario planning and climate change adaptation Incorporates the newest research and forest certification standards Offers access to a companion website with updated solutions, geographic databases, and illustrations
